

Unlocking the power of the tiered laboratory network through laboratory mapping

Mapping laboratory networks: Why?

- Where are the laboratories ?
- What can they do?
- How much population is covered by the laboratory services?

Use the information to improve the functions of the laboratory network

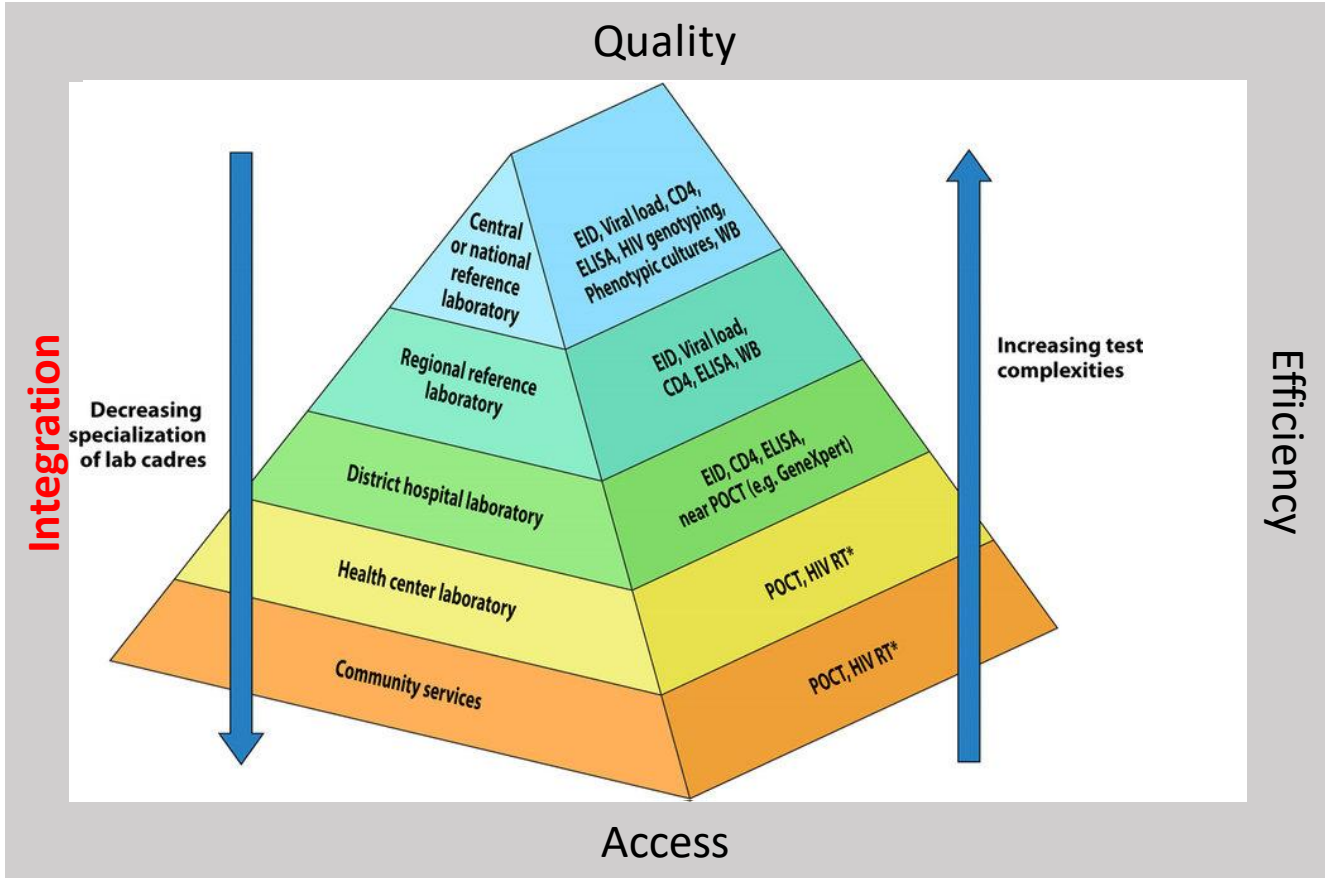

Strengthen the capacity of the laboratory technical working group (TWG) to manage the laboratory network

Re-introducing national tiered laboratory networks

Communicable diseases

Non-communicable diseases

If the laboratory network was a computer...

Laboratory systems

The hardware

- Infrastructure & supplies
- equipment
- Workforce
- Quality
- Data
- Etc.

Tiered Laboratory network

The software

- Mutualize resources
- Synergize functions
- Creates cost effectiveness
- Cover population need

Governance

The administrator

TWG

**MoH Laboratory
directorate**

Administrative leadership
Laws & regulation

**National Public Health
Laboratory**

Technical arm

**Disease
programmes**

**Private
sector**

**Research,
Academia**

Partners

The guiding principles of the network functions

- ❑ **Maputo declaration:** Integrated & quality laboratory services at all levels of health system/network
- ❑ **UHC:** access to health services for all, without causing financial hardship
- ❑ **IHR:** collective and coordinated prevention, detection and response to disease threat.
- ❑ **Freetown declaration:** clinical and surveillance functions conducted through a single integrated national network
- ❑ Others...

The laboratory mapping data can provide the evidence to shape the network according to these guiding principles

Collect Laboratory Data

- Use pre-configured, customizable and reusable digital forms via Ona.io that allow to collect data offline
- Collect GPS coordinates and service data via onsite assessments
- Integration to a facility registry (database) for curation & use,
- The data collection tool covers test menu (including AMR), QMS, staffing, linkage to networks, infrastructure, etc...

▼ Laboratory Staffing Information

▼ » Category of laboratory staff

How many pathologists work in the lab?

Pathologist: A physician who identifies diseases and conditions by studying abnormal cells and tissues.

How many microbiologists work in the lab?

Microbiologist: a scientist who studies microscopic life forms and processes.

* How many lab technologists work in the lab?

Laboratory technologist: is a healthcare professional who works in all areas of the clinical laboratory

* How many lab scientists work in the lab?

Laboratory technologist: is a healthcare professional who works in all areas of the clinical laboratory

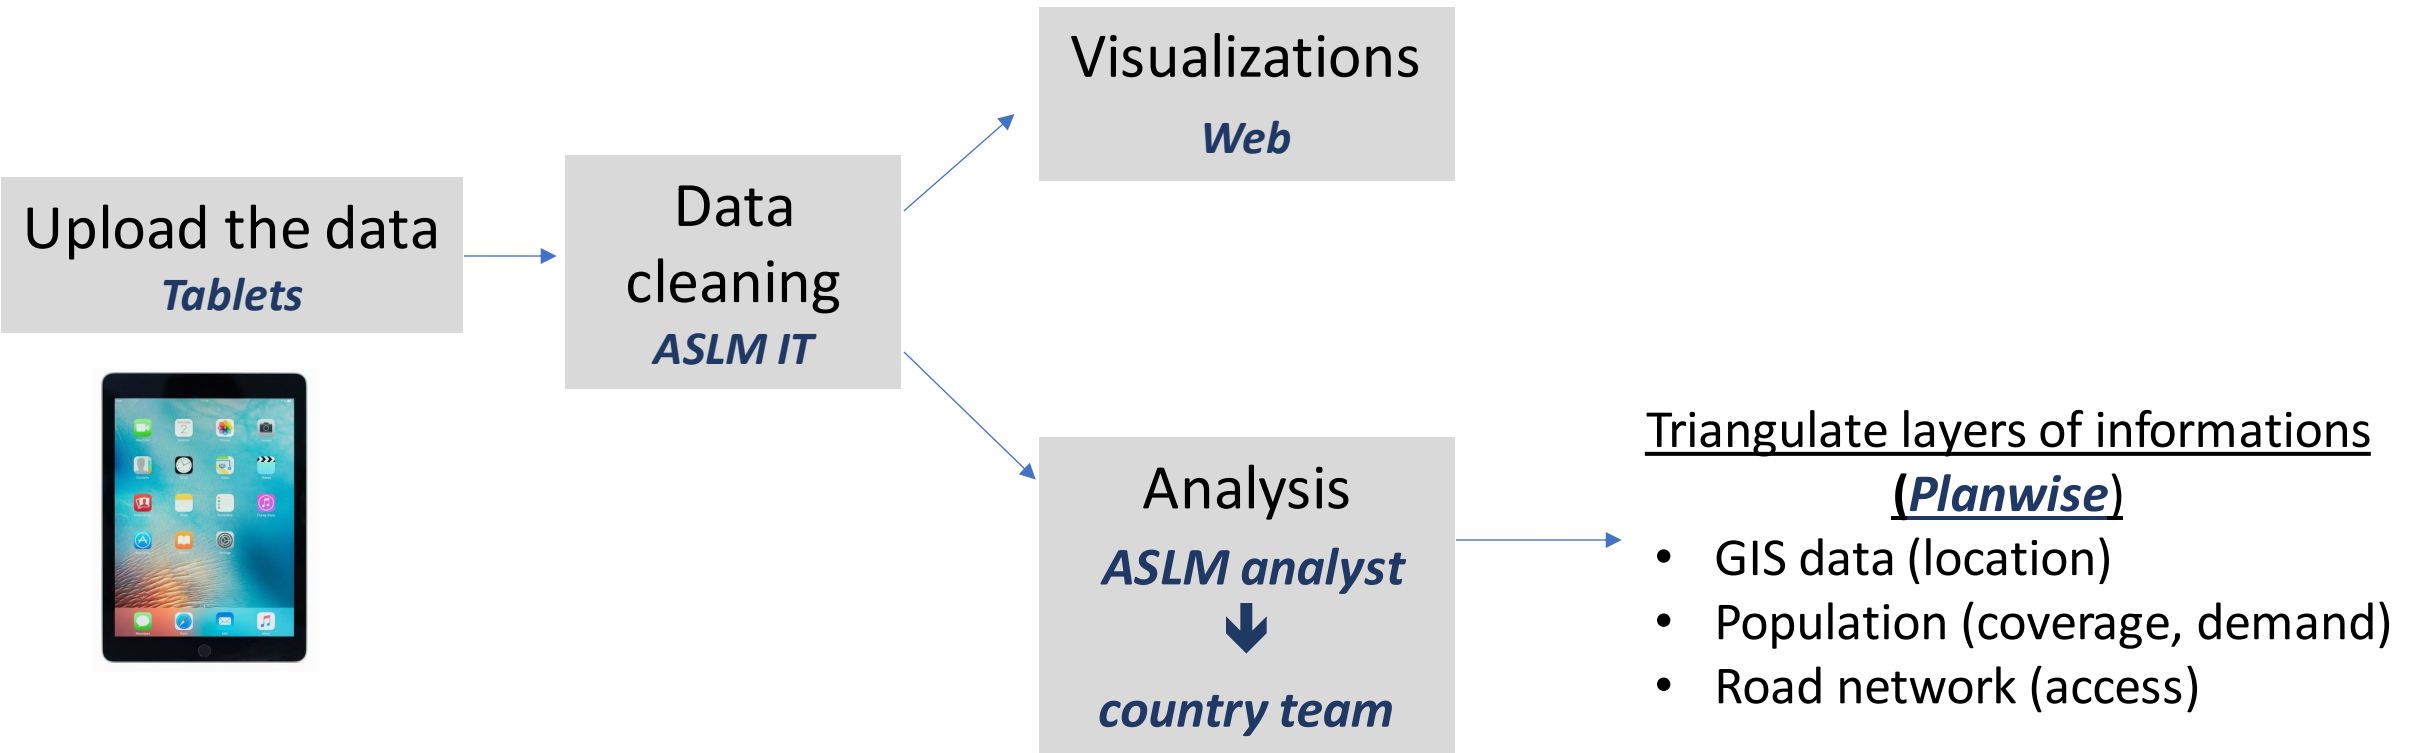

* How many lab technicians work in the lab?

Laboratory technicians: is a healthcare professional who works in the clinical laboratory and performs technical or diagnostic tests in medical or scientific laboratories

* How many lab assistants /microscopists work in the lab?

Laboratory assistance: is a healthcare professional who works directly with other health care providers and patients and in the exciting laboratory setting. Microscopist: works in medical laboratory setting and identifies infections and species of parasites by microscopic examination.

Mapping laboratories in Burkina Faso: the process

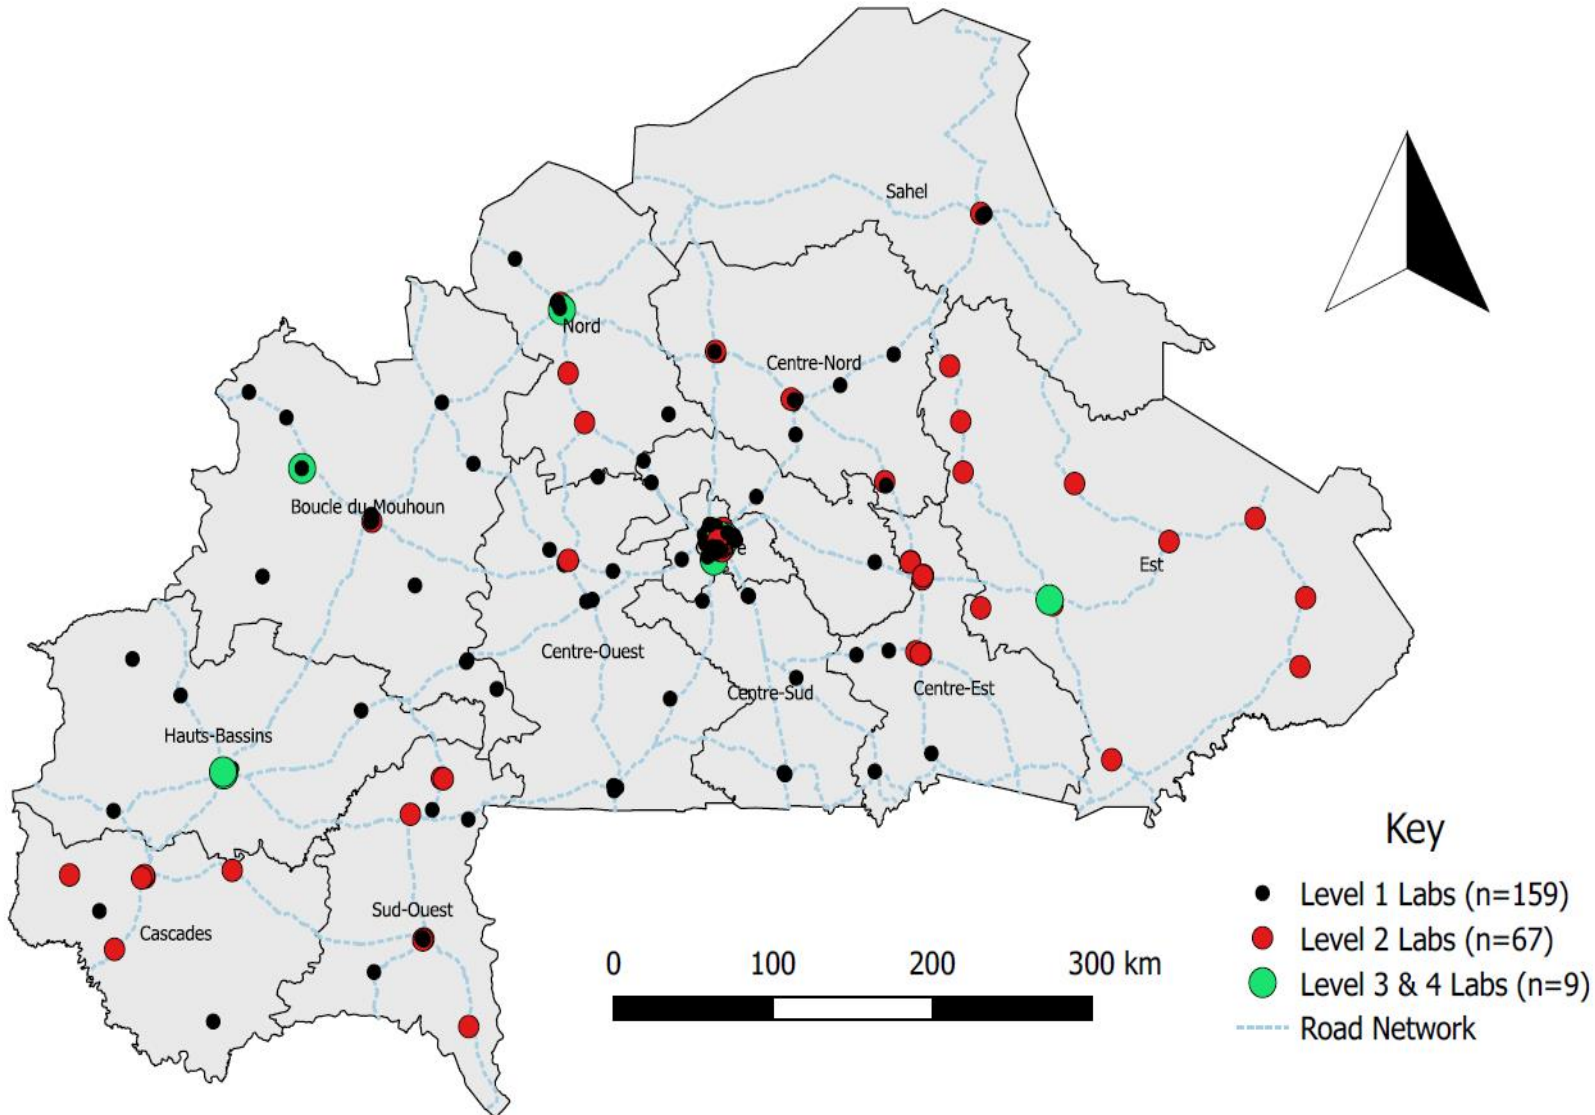

Preliminary analysis from Burkina Faso

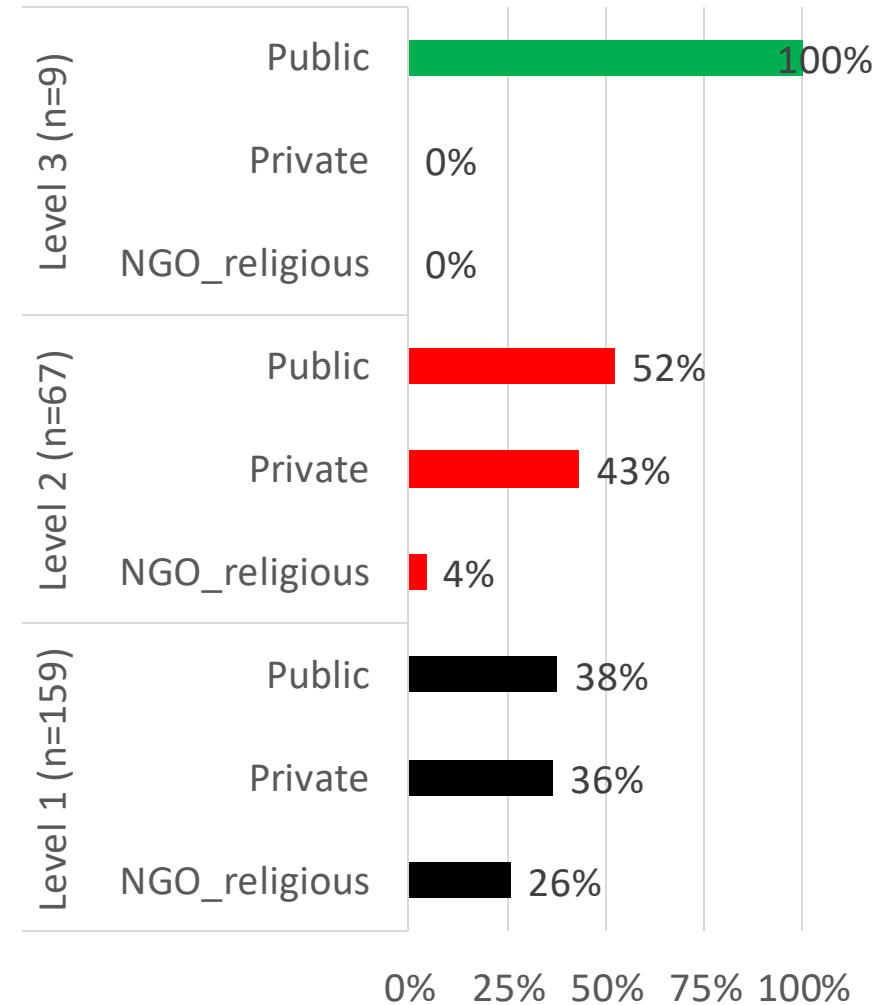

Ministère de la Santé

Distribution of the 235 Laboratories that are mapped

Geographical distribution

Distribution by affiliation

Case study 1:

Assessing the implementation of the tier-specific minimum testing package in Burkina Faso

National norm for medical laboratory testing in Burkina Faso guides the recommended minimum testing at each tier of the network (2009)

Population in Burkina Faso: 20,853,837 (WHO population database)

Coverage: access to care within a radius of maximum 2 hour travel (by car or on foot)

Using the labmap data to compare the norm and the practice

Exhaustive list aimed at capturing every possible diagnostics

Test menu (> 120 diagnostics)

- HIV diagnostics
- Hepatitis
- EHF
- Bacteriology
- Tuberculosis
- Parasitology
- Immuno-Hematology
- Blood banking
- Histology

Priorities of
Burkina Faso MoH

Actual availability of
tests at each tier

- Tier 1
- Tier 2
- Tier 3

Gaps between policy
and practices

The case of HIV and tuberculosis diagnostic

What do national norms recommend in terms of HIV and tuberculosis testing?

HIV

Diagnostics captured in the labMap data collection tool (ONA)

In the norm Y/N?

Genotypic ARV resistance testing

Viral load (HIV)

Human Immunodeficiency Virus (HIV)
Polymerase chain reaction(PCR) for...

Early Infant diagnosis (EID); preparation
of dried blood spot (DBS) for Early...

Line immunoassay (LIA) / western blot
(WB)

HIV serology (enzyme-linked
immunosorbent assay (ELISA) linked...

Rapid HIV antibody tests

Tuberculosis

Diagnostics captured in the labMap data collection tool (ONA)

In the norm Y/N?

DST second-line

DST first-line

MTBDR Plus Probe assay

GeneXpert MTB

Tuberculosis PCR

Culture liquid media MGIT

Culture solid media

Lateral flow urine assay (LAM)

TB LAMP

Light emitting Diode (LED) fluorescent
microscopy

AFB smear Ziehl Neelsen

Is the minimum testing package for HIV (the norm) implemented?

Diagnostic test expected at each tier level according to the norms of BF

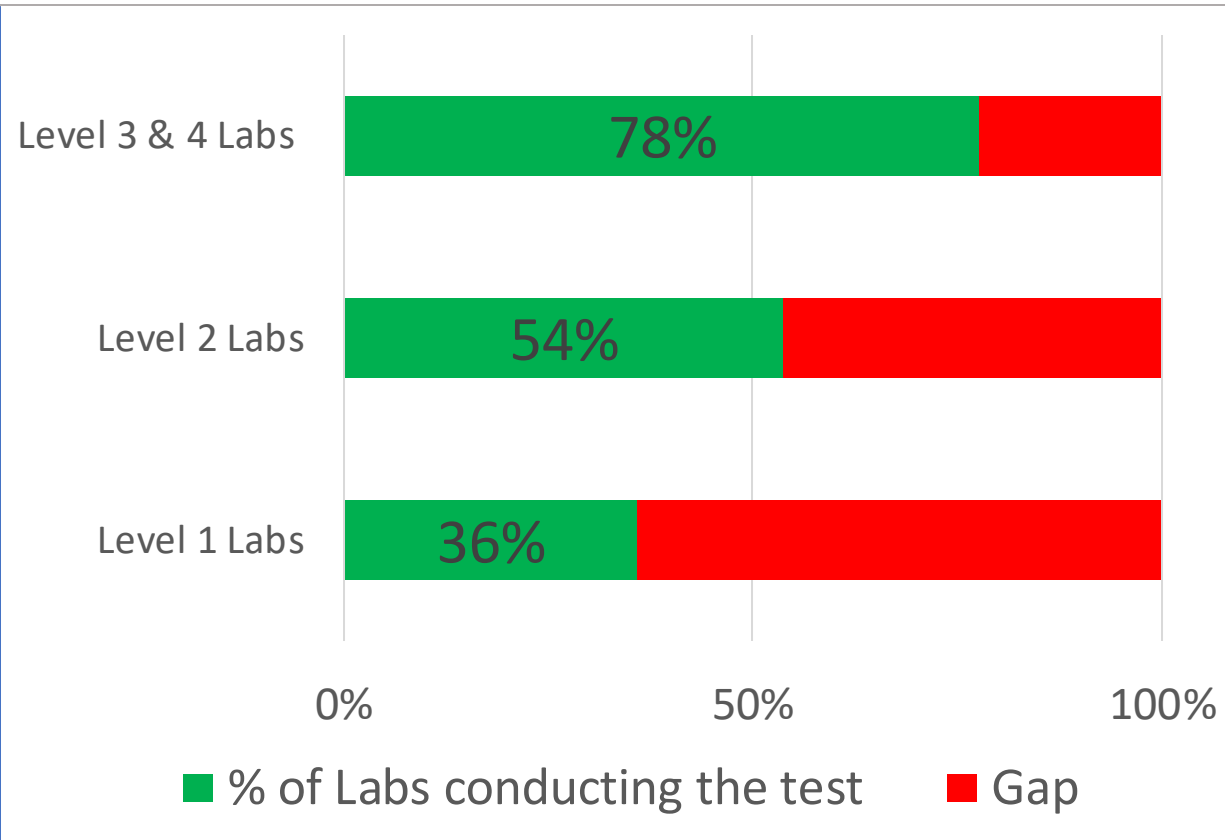

- **Tier 1**
 - Rapid antibody tests HIV
- **Tier 2**
 - Rapid antibody tests HIV
 - HIV Serology(ELISA)
 - Viral load
- **Tiers 3 et 4**
 - Rapid antibody tests HIV
 - HIV Serology(ELISA)
 - Viral load

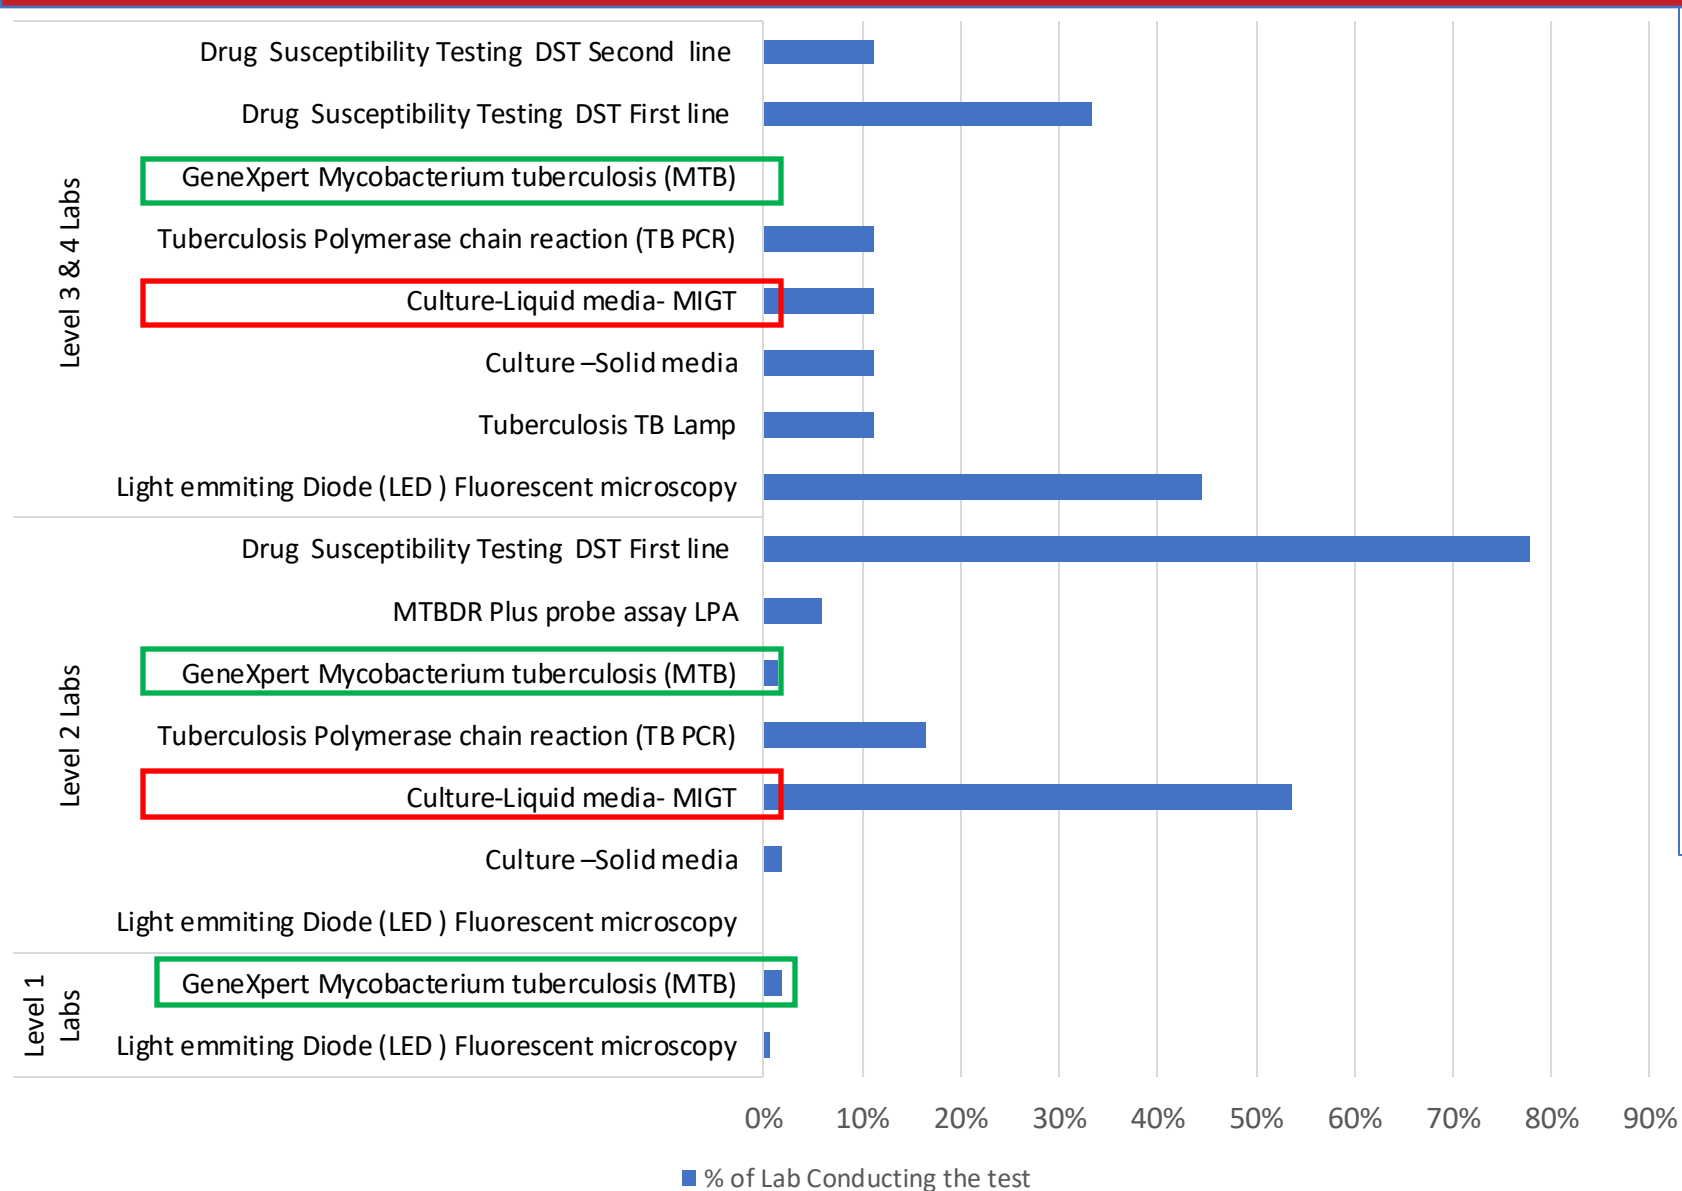

Is microscopy for AFB implemented at all level?

Diagnostic tests expected at each tier level according to the norms of BF

- **Level 1**
 - AFB
- **Level 2**
 - AFB
- **Level 3 and 4 labs**
 - AFB

When practice is ahead of the norm

Tests not included in the norms, but which are implemented

- fluorescence microscopy LED
- Test TB Lamp
- Culture –solid medium
- Culture- liquid medium MIGT
- NAAT (PCR) TB
- Test GeneXpert (MTB)
- LPA MTBDR Plus
- DST first-line
- DST second-line

The norms need an update!!

Implication of test implementation in terms of population coverage

Exhaustive list

Test menu (> 120 diagnostics)

- HIV diagnostics
- Hepatitis
- EHF
- Bacteriology
- Tuberculosis
- Parasitology
- Immuno-Hematology
- Blood banking
- Histology

Priorities of Burkina Faso MoH

Actual availability of tests at each tier

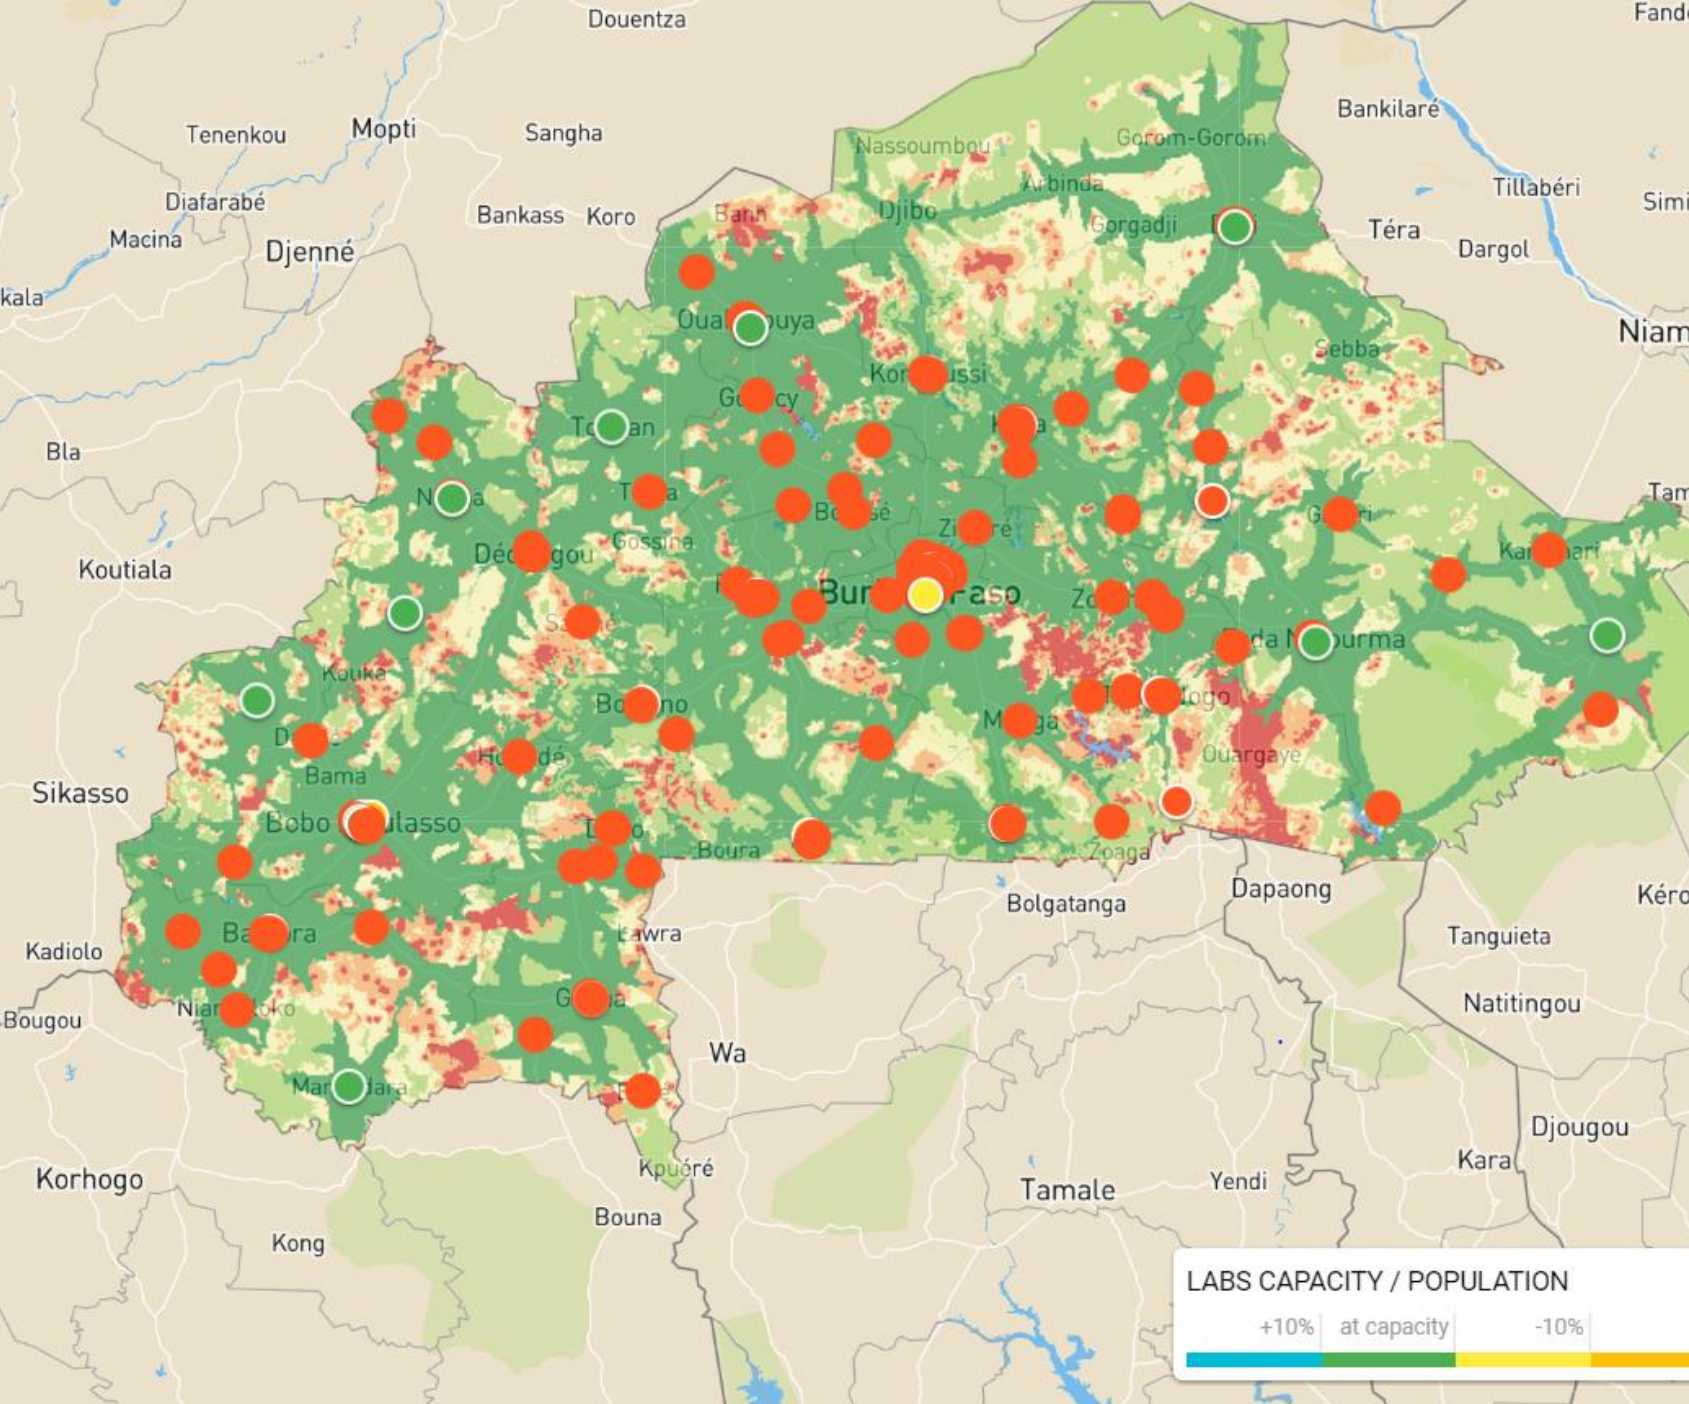

- Tier 1
- Tier 2
- Tier 3

Gaps between policy and practices

Population not covered

Population covered

Implication for UHC
Prioritizing improvements

INCREASE IN TESTS COVERAGE
16,204,581
(77.69%)

to a total of 16,204,802 (77.69%)

TOTAL TESTS UNDER GEOGRAPHIC COVERAGE

17,695,153

EFFORT REQUIRED

29

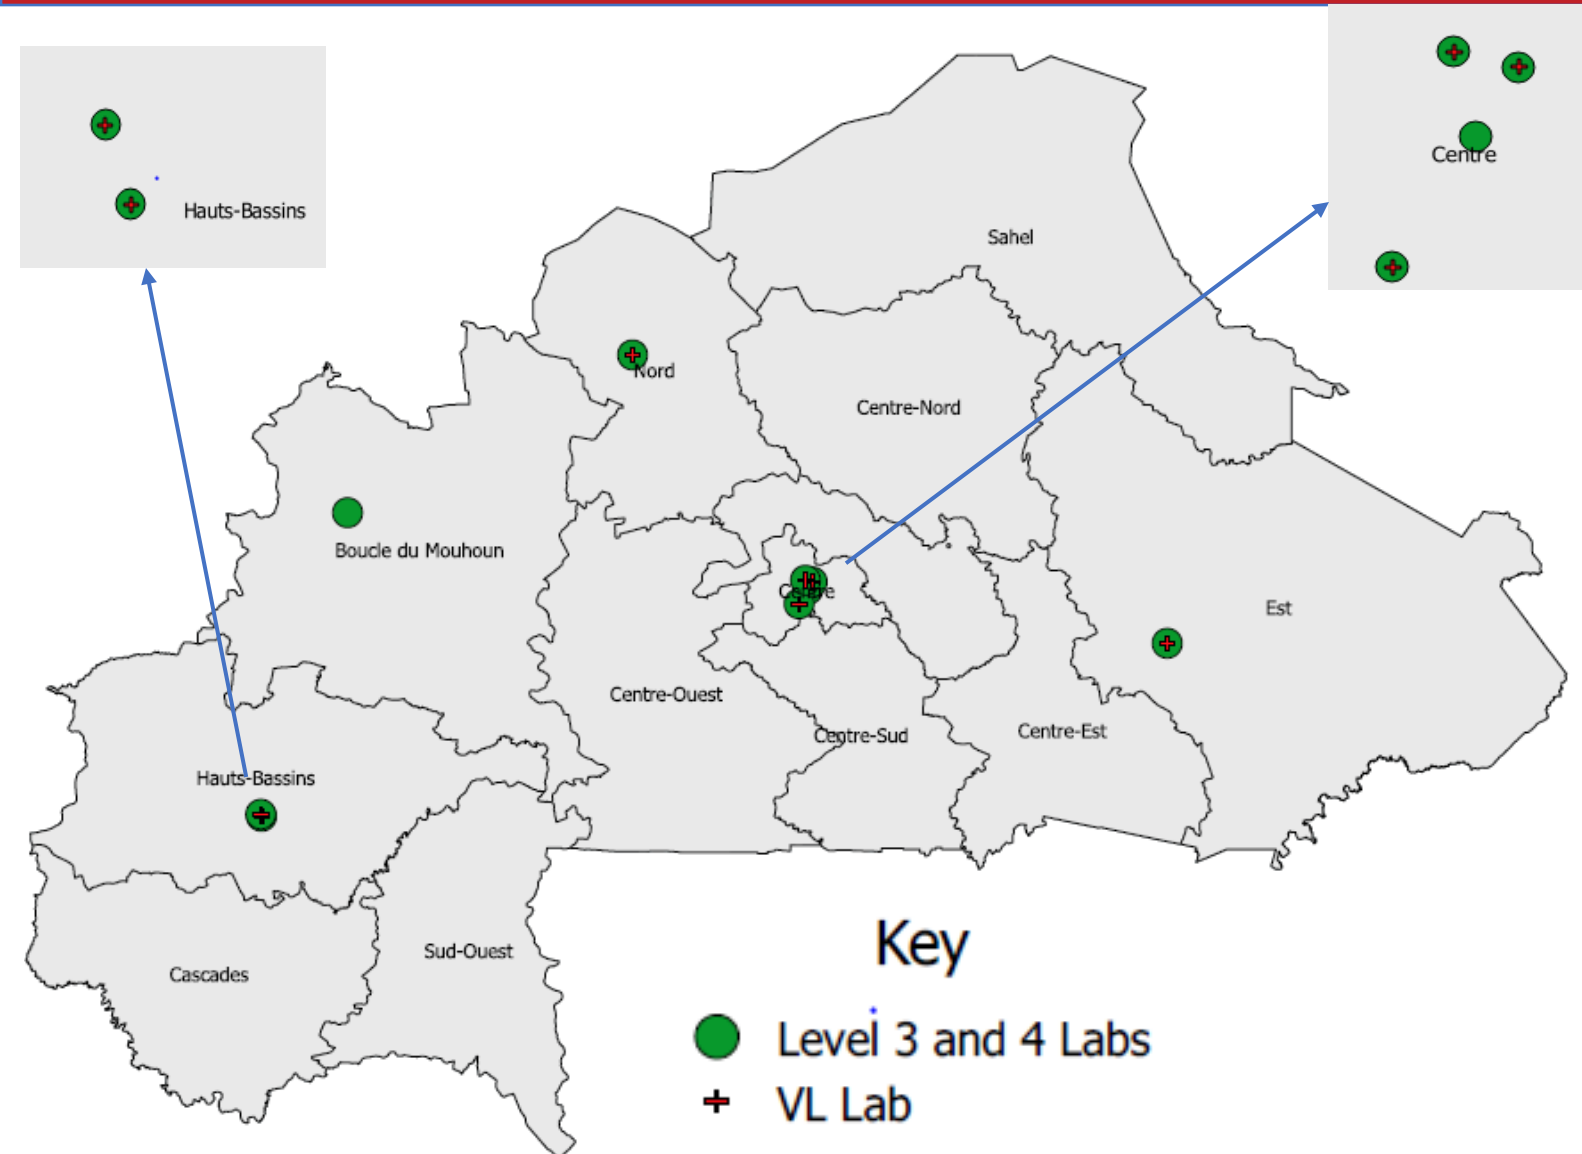

device to serve / 9,344 tests

+ Laboratoire CHUR/Ouahigouya
 Increased capacity on 1,186,509 test
 device to serve 1,080,382 tests

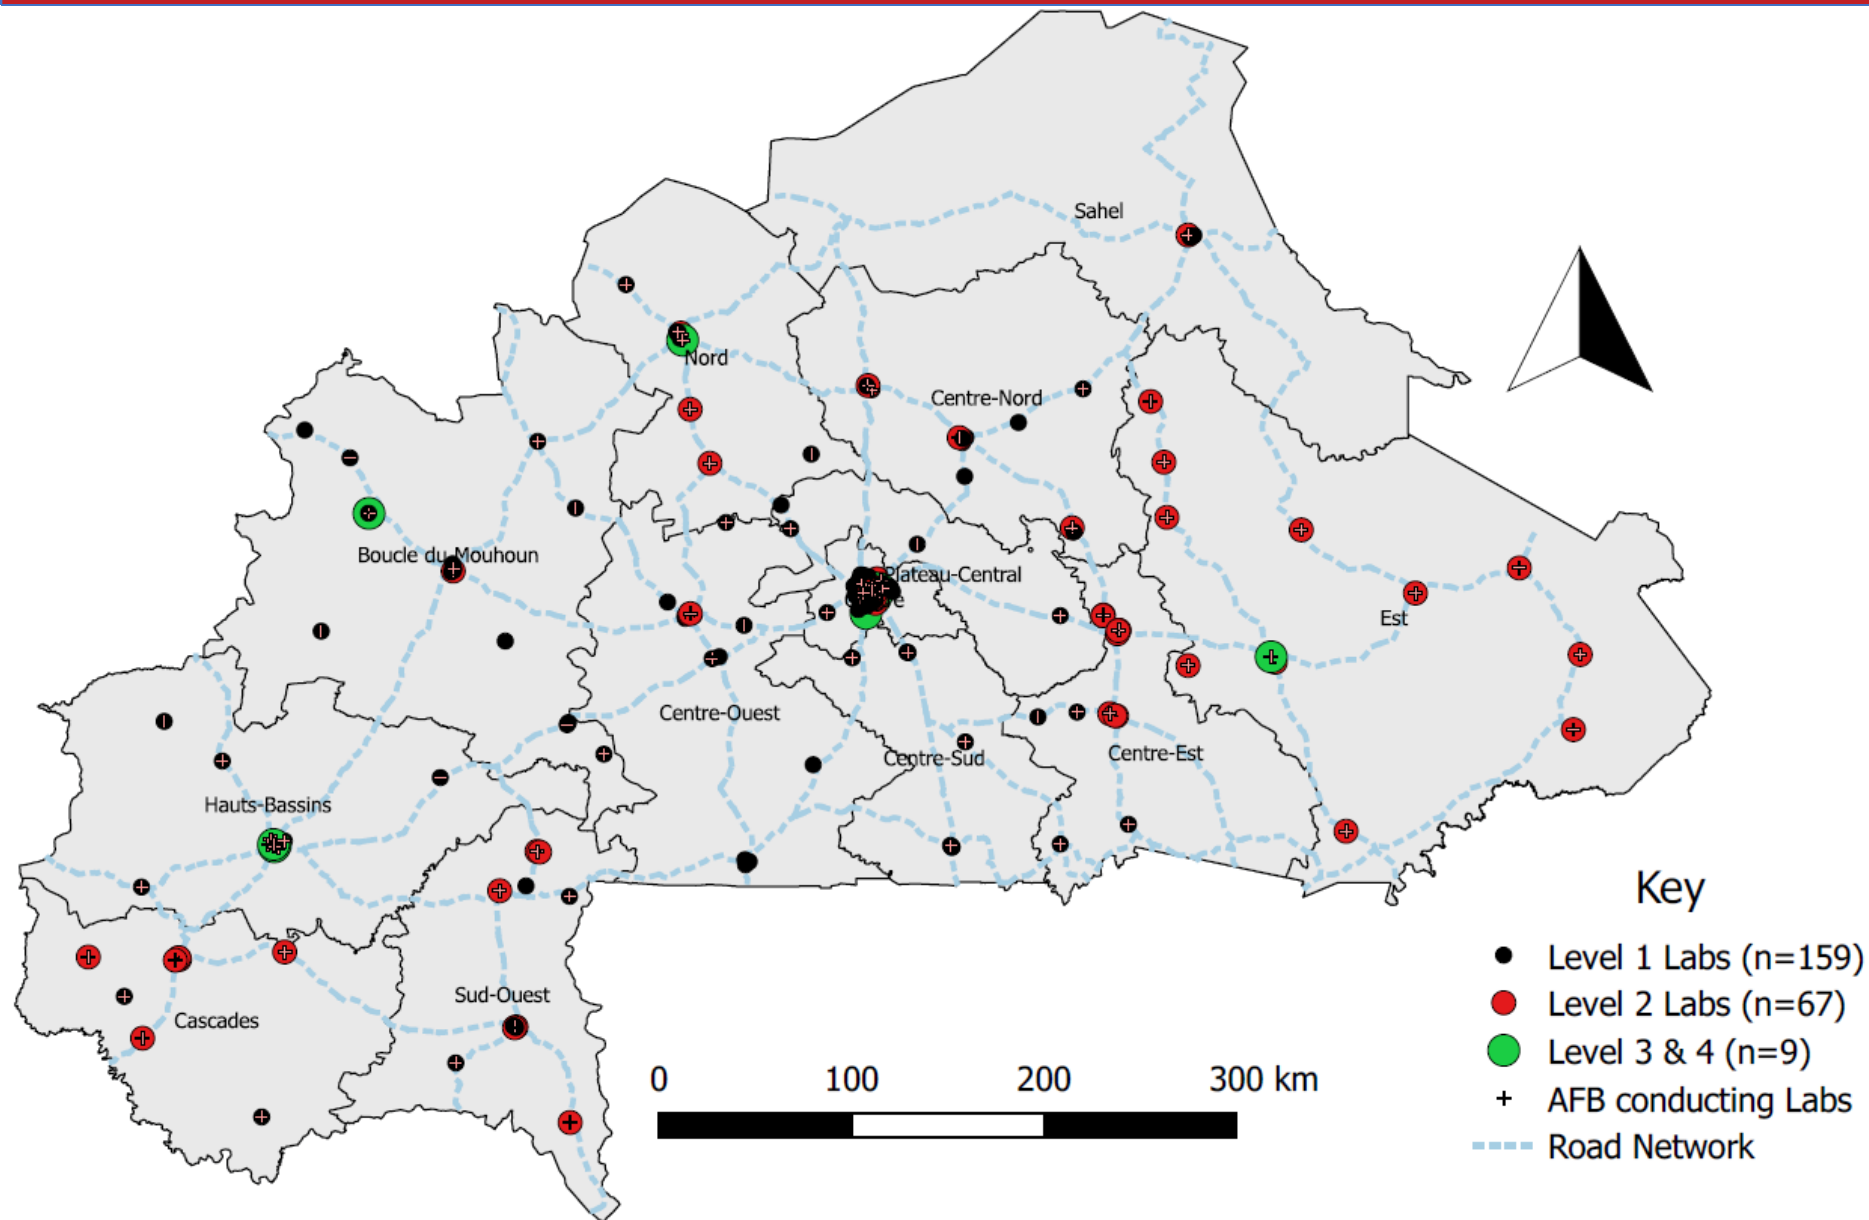

+ Laboratoire du Centre Hospitalier
 Universitaire Sourou Sanou (CHUSS)
 Increased capacity on 2,324,959 test
 device to serve 2,324,960 tests

Distribution et population coverage of HIV viral load

- 7 of 9 laboratories at tiers 3 & 4 provide HIV Viral load services.
- **59.3% of the population is covered** (within a radius of 2 hours travel)

Distribution et population coverage of microscopy for AFB

100 Laboratories conduct microscopy for the identification of AFB

- 57 at tier 1
- 36 at tier 2
- 7 at tiers 3 & 4

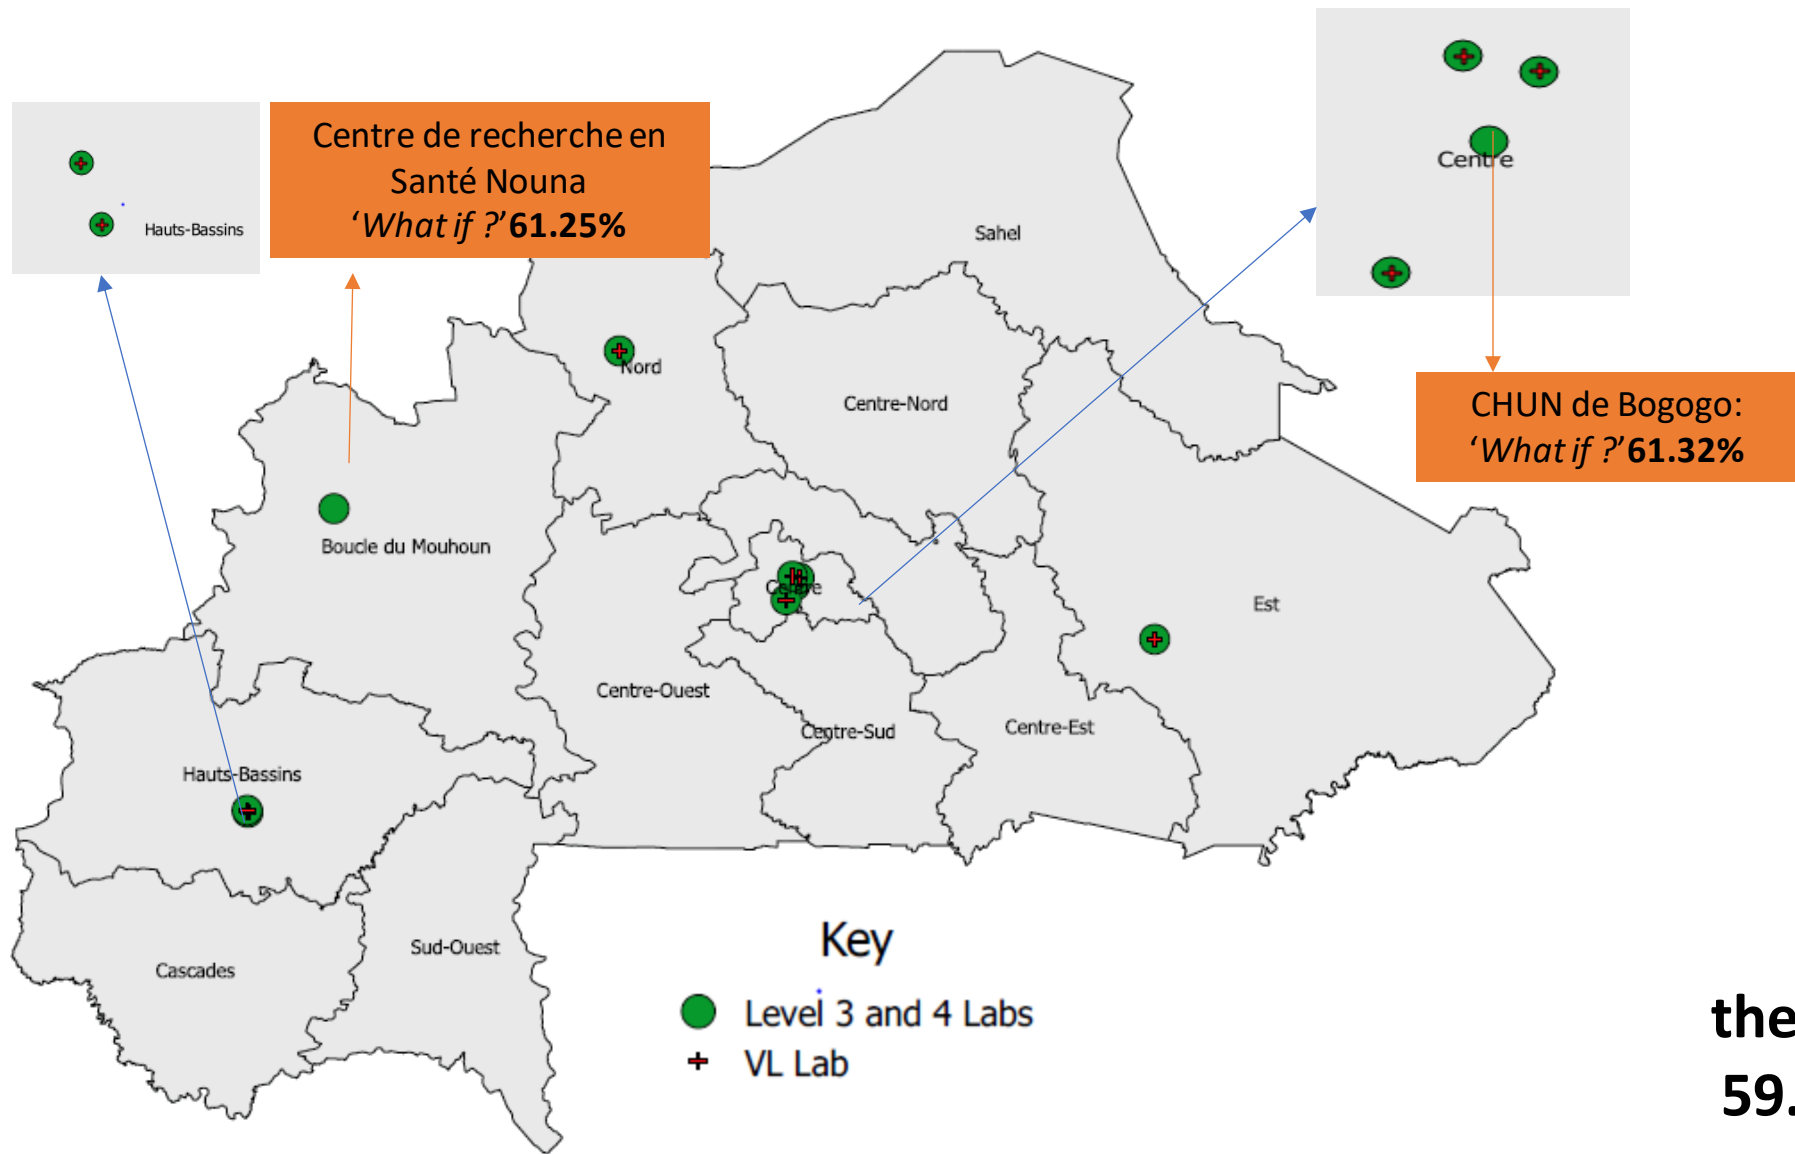

Good population coverage (almost 100%), but microscopy is not the most reliable technique

'What if?' scenarios

Case study: increase the population coverage of HIV
Viral load

1. *Bring non-conform laboratories to the norms*
2. *Integrate VL testing to existing GeneXpert sites*
3. *Place new VL capacity*

Improve the population coverage by increasing compliance to the norm

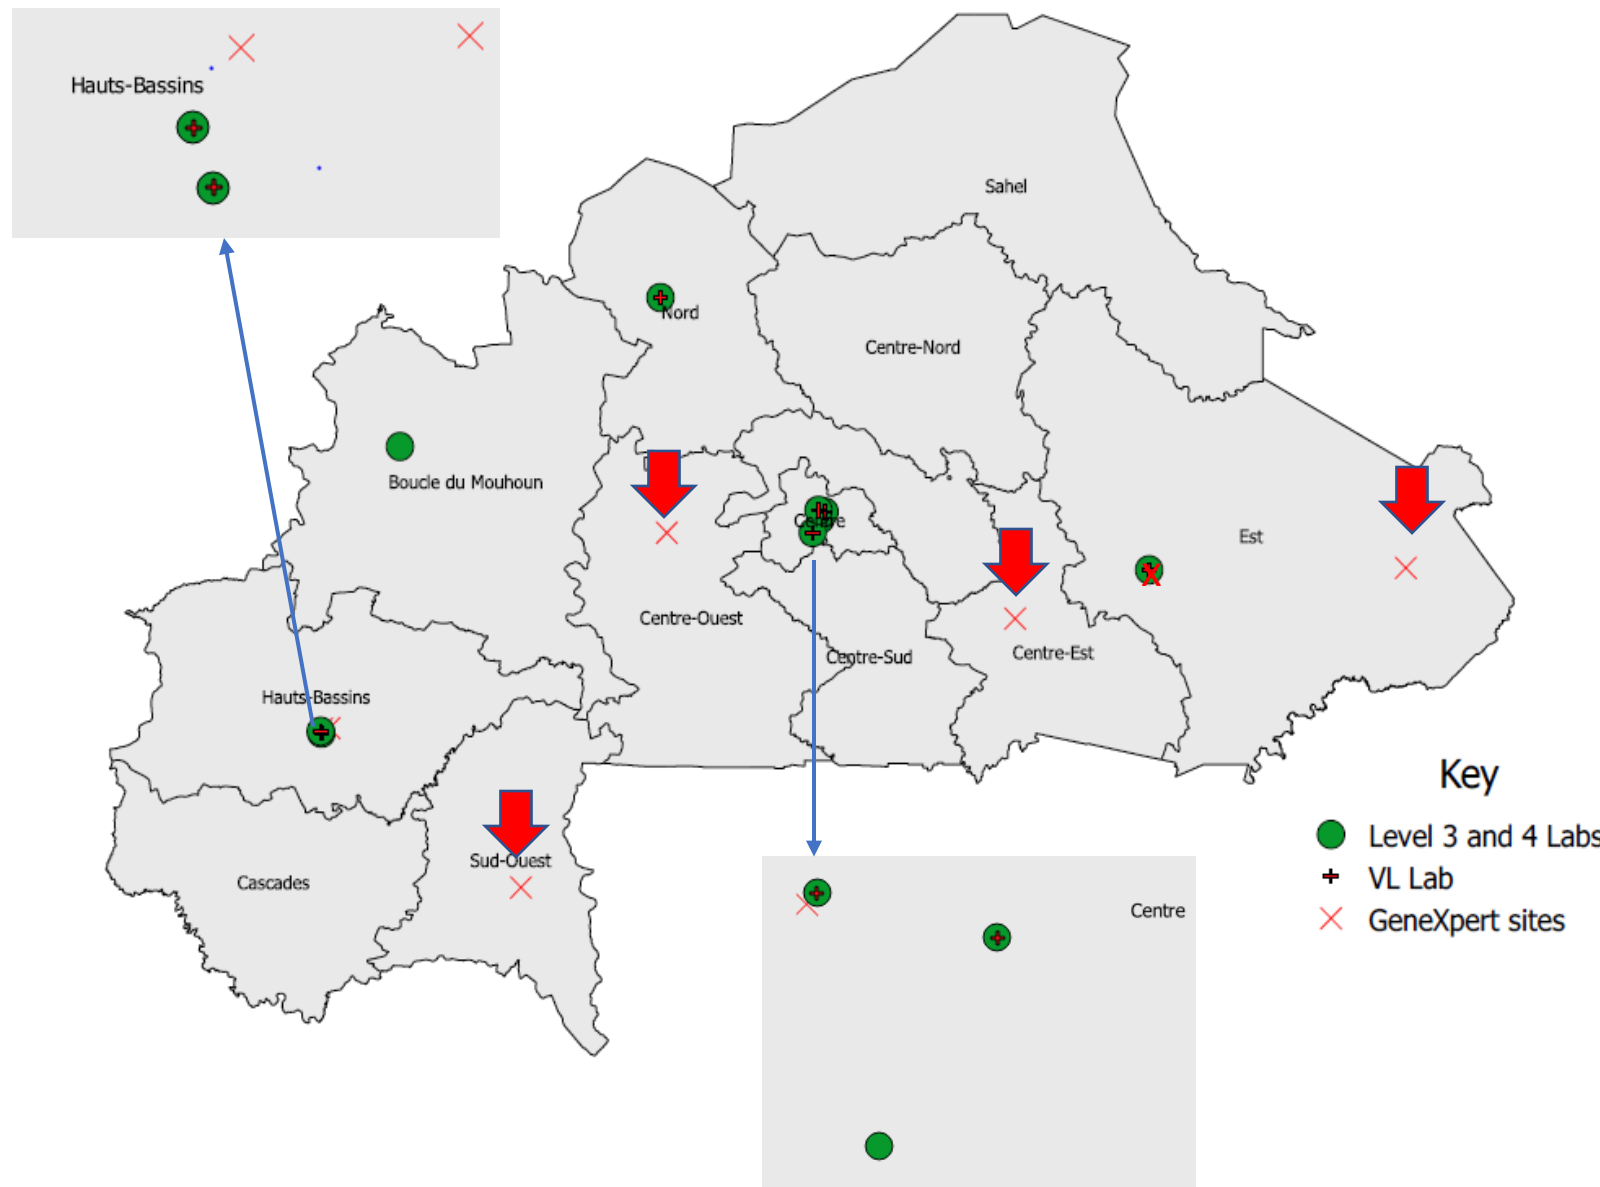

Bring tiers 3 & 4 laboratories to the norm

Population coverage theoretically increases from 59.3% to 61.25% to 61.32%

Improve the population coverage by decentralizing VL testing toward geneXpert sites

4 / 8 GeneXpert sites are located in regions not covered by any HIV viral load laboratories.

IF VL is decentralized in those 4 sites

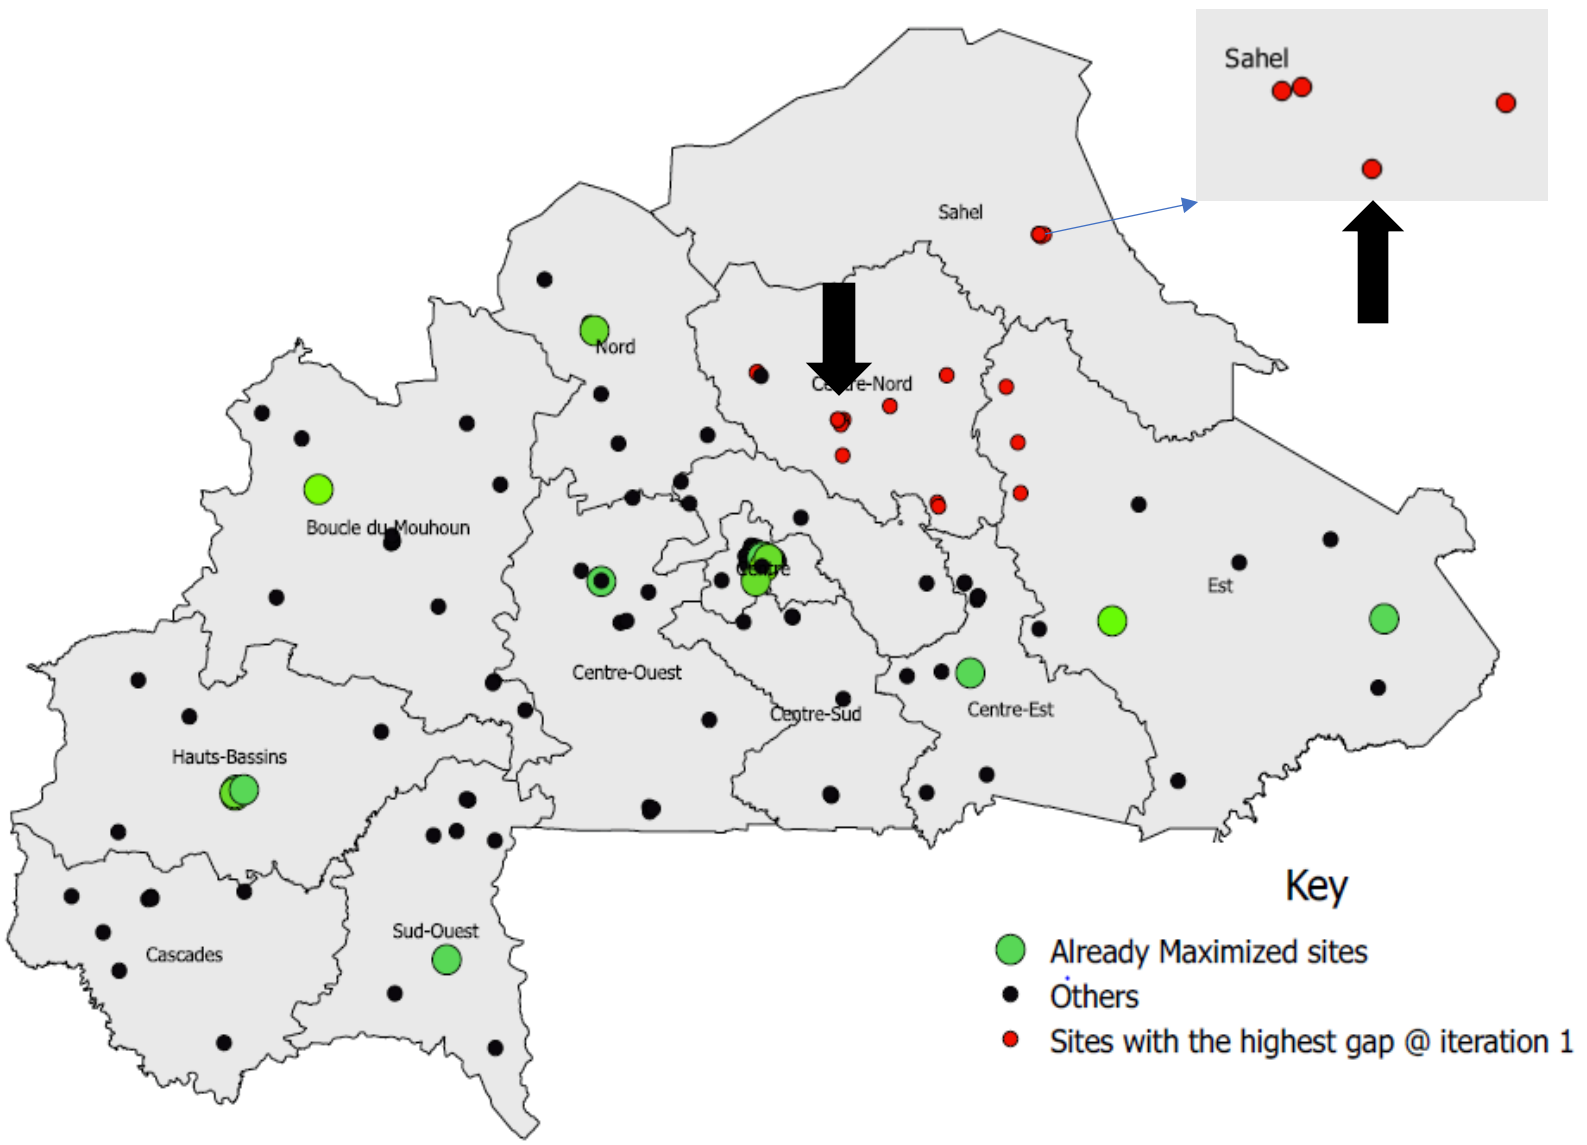

**Population coverage increase
from 62.32% to 67.95%**

Where to place new capacity to increase the coverage up to 80%?

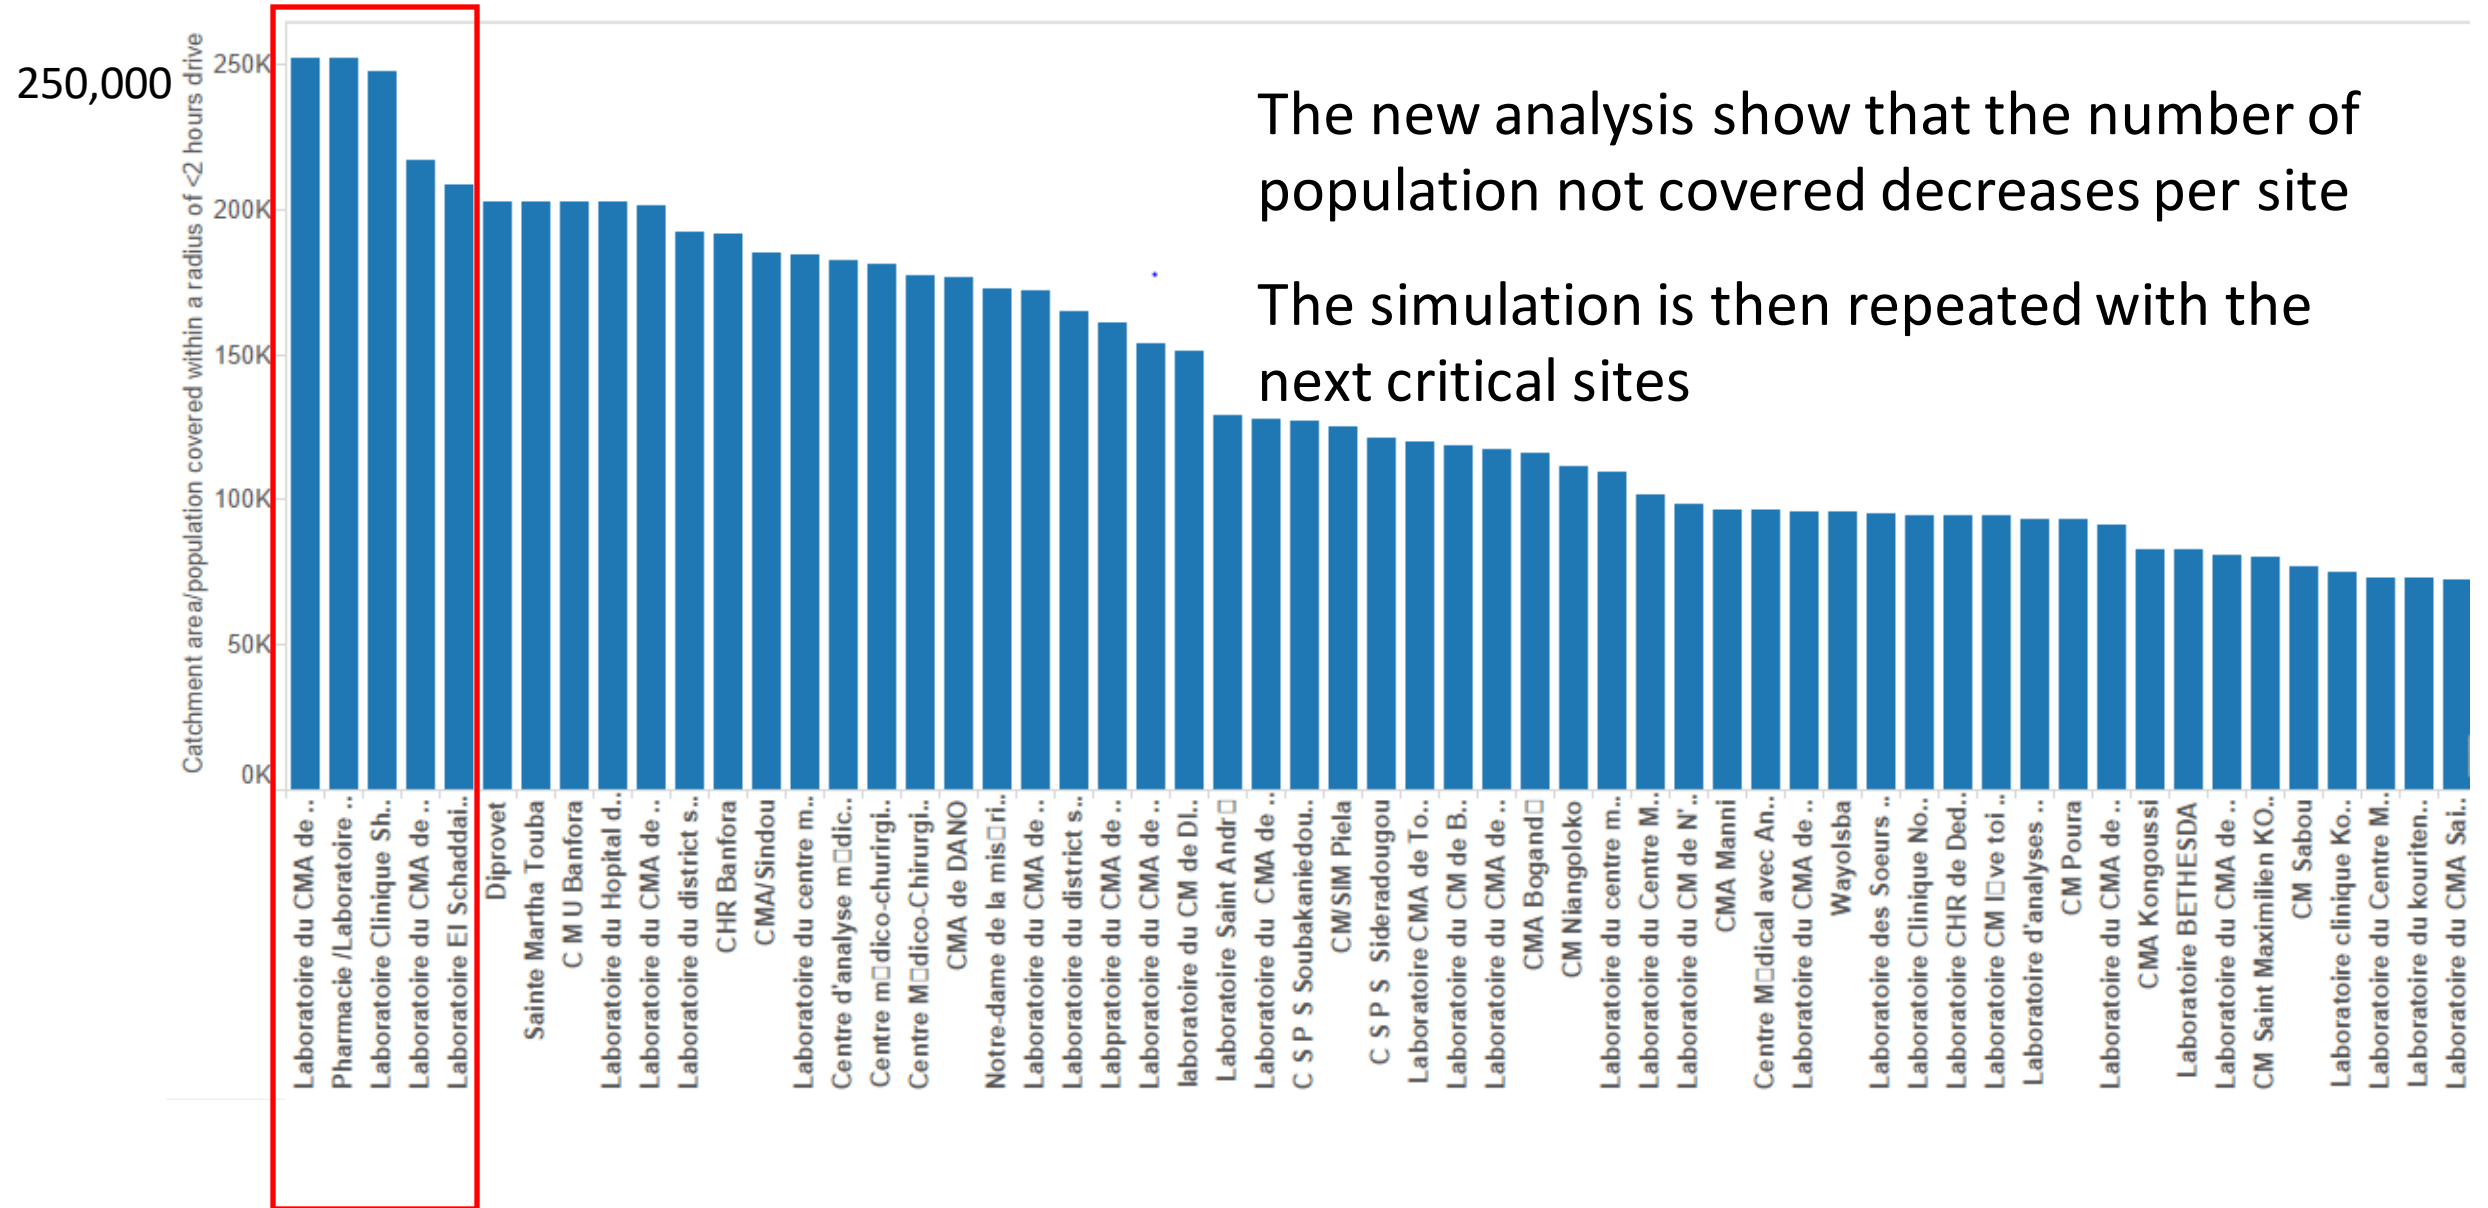

Key considerations to place new Viral Load testing capacity

Key Considerations

1. The sites of Sahel, Centre-Nord and Est are the one with most unsatisfied demand for VL.
2. When the **Laboratoire du Centre Medical Urbain de Dori** in Sahel is activated, the population coverage increases from **67.95 to 71.39%**
3. When the **Laboratoire du Centre Medical du secteur 1** au Centre-Nord is activated, the population coverage increase from **71.99 to 72.84%** with a spillover to the East.

2nd iteration towards 80% population coverage

Limitations and key considerations

- ❑ The choice of bringing laboratories to the norms, placing new capacity, integrate VL on geneXpert available within the TB programme **depends on the priorities of the Government**

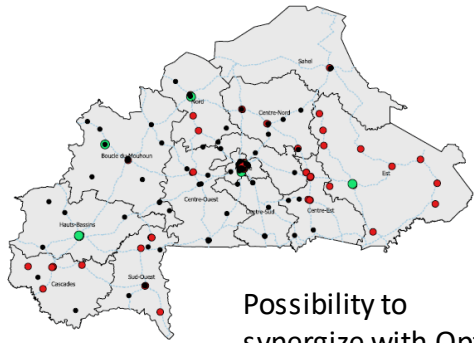

Perspectives for Burkina Faso

- ❑ Consolidate the LabMap portal of Burkina Faso (at the MoH)
- ❑ Train the Burkina Faso data team to use the data and run their own scenarios for:
 - Developing, adjusting and optimizing the performance and capacity of the tiered laboratory network
 - Quickly identify the sites that can be activated during outbreak response, and for a maximum of population coverage
 - Monitor the implementation of the recommended minimum testing packages
 - Guide the mutualizing of resources in general and test integration in particular

Scenarios can inform national plans and/or funding requests

Perspectives of the LabMap program

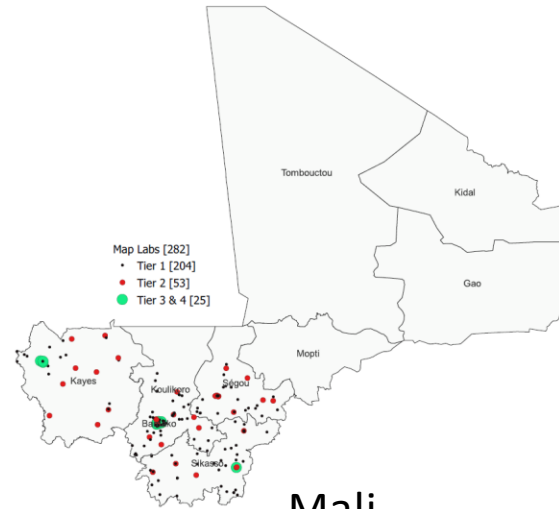

Possibility to synergize with OptiDx from FIND

Burkina Faso

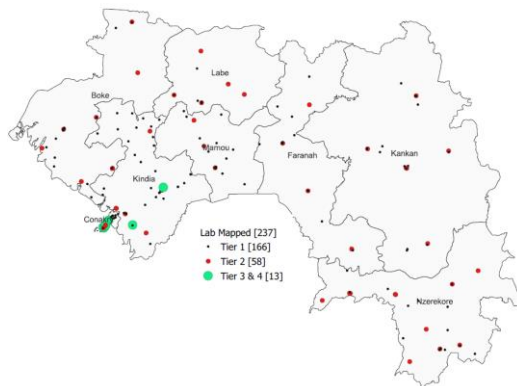

DRC

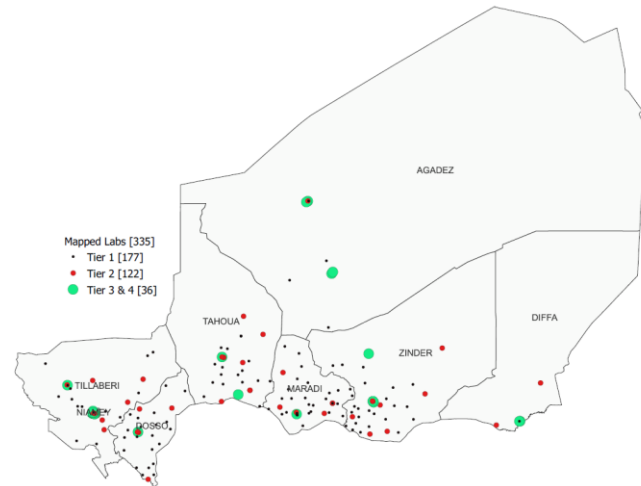

Mali

Cameroon

Guinea

Niger

- Gabon
- Chad
- Congo
- Sao Tomé
- CAR
- Malawi
- Zambia
- Zimbabwe

Data collection with contribution from partners and funders

- IDDS
- GHSA
- Fondation Mérieux
- GHSS
- IRESSEF

Niger integrated their data with DHIS-2

Perspectives of the LabMap program

- Ensure that all countries that completed the collections are trained and fully independent (Guinea, Mali, Burkina)
- Finalize data collection in countries already started and enroll new countries through the Africa CDC RISLNET
- Link the data update to the national system for laboratory registration and licensing
- Facilitate collaboration with partners also working on GIS-based laboratory improvement

Training of data collector Burkina Faso
