

Stepwise Laboratory Quality Improvement Process Towards Accreditation (SLIPTA) Checklist

Version 3:2023

For Clinical and Public Health Laboratories

Introduction

Medical laboratories play an essential role in determining clinical decisions and providing clinicians with information that assists in the prevention, diagnosis, treatment, and management of diseases. However, inadequate investment has meant that many medical laboratories in Africa lack the necessary infrastructure, equipment, and resources to provide an effective and quality service. Although the last decade has seen significant strides in the strengthening of laboratory systems in Africa, challenges remain across most countries at all tiers of their systems. Therefore, the strengthening of laboratory systems and services remains a priority. The establishment of a process by which laboratories can establish and monitor management systems towards the achievement of accreditation to international standards remains an invaluable tool for countries to improve the quality of laboratory services in a stepwise and sustainable manner.

In accordance with World Health Organization (WHO) core functions of setting standards and building institutional capacity, WHO Regional Office for Africa (AFRO), in collaboration with the African Society for Laboratory Medicine (ASLM), the United States Centers for Disease Control and Prevention (CDC) and host countries established the Stepwise Laboratory Quality Improvement Process Towards Accreditation (SLIPTA) to strengthen the laboratory management systems of its Member States. SLIPTA is a framework for improving the quality of medical laboratories in developing countries to achieve the requirements of the International Standards Organization (ISO) 15189 standard. It is a process that enables laboratories to develop and document their ability to detect, identify, and promptly report all diseases of public health significance that may be present in clinical samples.

This initiative was spearheaded by several critical resolutions, including WHO Resolution AFR/RC58/R2 on Public Health Laboratory Strengthening, adopted by the Member States during the 58th session of the Regional Committee in September 2008 in Yaoundé, Cameroon, and the 2003 Maputo Declaration to strengthen laboratory systems. This quality improvement process towards accreditation further provides a learning opportunity and pathway for continuous quality improvement, a mechanism for identifying resource and training needs, a measure of progress, and a link to the WHO's Laboratory Networks and Services team. Clinical, public health, and reference laboratories participating in the SLIPTA programme are supported in the process of establishing or strengthening their management systems to compliance with international standards in a stepwise manner, that recognises their progress through audits and the awarding of certificates of recognition. This quality improvement process towards accreditation further provides a learning opportunity and pathway for continuous improvement, a mechanism for identifying resource and training needs, better commitment of management and personnel that ensure quality diagnostic service in line with WHO AFRO complete healthcare services.

This checklist was developed as a framework and guide for laboratories on all the necessary elements to set up a functioning laboratory management system that meets international standards. This third edition has been updated through an expert review process to align with the new ISO 15189:2022 standard. This checklist is to be used in parallel with the SLIPTA Implementation Guide, which provides further guidance on requirements and implementation considerations.

Scope

This checklist specifies requirements for quality and compliance aimed to develop and improve laboratory services to established national standards. The elements of this checklist are based on ISO standard 15189:2022 (E) and, to a lesser extent, the Clinical & Laboratory Standards Institute (CLSI) guideline QMS01-A4, Laboratory Management System: A Model for Laboratory Services; Approved Guideline – Fourth Edition.

This document is applicable to medical laboratories in developing their management systems and assessing their compliance.

This document is also applicable to point-of-care testing (POCT).

Recognition is provided using a five-star, tiered approach, based on a bi-annual, on-site audit of laboratory operating procedures, practices, and performance. The audit checklist score will correspond to the number of stars awarded to a laboratory in the following manner:

No Stars (0 – 205 pts)	1 Star (206 – 240 pts)	2 Stars (241 – 277 pts)	3 Stars (278 – 314 pts)	4 Stars (315 – 352 pts)	5 Stars (353 – 373 pts)
< 55%	55 – 64%	65 – 74%	75 – 84%	85 – 94%	≥95%

Purpose

The intended purpose of the SLIPTA Checklist is to evaluate and verify the establishment, implementation and improvement of the quality management system in medical laboratories. This checklist shall be completed by a trained and certified SLIPTA Auditor and is for recognition purposes based on the SLIPTA star levels. The SLIPTA certificate will not replace accreditation or certification.

Instructions for use

The SLIPTA checklist promotes the adoption of a process approach when developing, implementing and improving the effectiveness of a management system, with the objective of meeting customer expectations and providing laboratory testing services.

When this checklist is used as a soft copy, it can be completed as a form by typing in the grey blocks.

The guidance given as "Note" in each question describes concepts, examples and methods that can be considered by the organisations when the laboratory is establishing, implementing and maintaining a management system.

An organisation can incorporate guidance from the "Note" in each question, wholly or in part, into its management system.

Parts of the Audit

This Laboratory audit checklist consists of three parts:

Part I: Laboratory Profile Part II: Laboratory Audits

Evaluation of Laboratory operating procedures, practices, and tables for reporting performance

Part III: Summary of Audit Findings

Summary of findings of the SLIPTA audit and action planning worksheet

Part I: Laboratory Profile

Part II: Laboratory Audits

Laboratory audits are an effective means to:

- a. Determine if a laboratory is providing accurate and reliable results;
- b. Determine if the laboratory is well-managed and is adhering to good laboratory practices; and
- c. Identify areas for improvement.

Auditors must complete this SLIPTA checklist using the methods below to evaluate laboratory operations as per the checklist questions and to document audit findings (including strengths of the laboratory operations).

- Review laboratory documents to verify that the laboratory quality manual, policies, standard operating
 procedures (SOPs) and other manuals (e.g., safety manual and laboratory handbook) are complete, current,
 periodically reviewed and document controlled.
- Review laboratory records such as equipment maintenance records, incident reports, environmental
 condition logs, personnel files, internal quality control (IQC) records, external quality assessment (EQA)
 records, etc.
- Observe laboratory operations to ensure:
 - Laboratory testing follows written policies and procedures in pre-examination, examination and postexamination processes of laboratory testing;
 - o Laboratory procedures are appropriate and current for the testing performed; and
 - Observations and nonconformities identified are adequately investigated and resolved within the defined timeframe.
- Ask open-ended questions to clarify documentation reviewed and observations made. Ask questions like,
 "show me how..." or "tell me about...". It is often not necessary to ask all the checklist questions verbatim. An
 experienced auditor can often learn to answer multiple checklist questions through open-ended questions
 with the laboratory staff.
- **Follow a specimen through the laboratory** from collection through all the laboratory processes (i.e., pre-examination, examination and post-examination).
- Confirm that each test result or batch of results can be traced and verified against acceptable IQC results.
- Confirm EQA / proficiency testing results are reviewed and corrective action taken as required.
- Evaluate the quality and efficiency of supporting work areas (e.g., phlebotomy, data registration and reception, messengers, drivers, cleaners, IT, etc.).
- **Interview clinicians** to establish the users' perspective of the laboratory's performance.

Audit Scoring

This SLIPTA Checklist contains 12 main sections with a total of 145 questions and a possible total score of 373 points.

For each question, indicate as relevant, Yes (Y), Partial (P), No (N) or Not Applicable (NA). All elements of the question must be satisfactorily present to indicate Yes (Y). Provide comments for each Partial (P), No (N) or Not Applicable (NA). In the comment field, the auditor must provide information on what was audited, i.e., make reference to documentation, equipment, personnel, etc.

Each item has been awarded a point value of 2 or 3 based upon relative importance and/or complexity.

Questions marked (Y) will receive the corresponding point value 2 (two) or 3 (three).
 All elements of a question must satisfactorily be present in order to indicate (Y) for a given question and thus award the corresponding points.

NOTE: Questions that include 'sub-questions' must receive all (Y) and/or (NA) responses to be marked (Y) for the overarching item.

- Items marked (P) will receive 1 (one) point for all questions.
- Items marked (N) receive 0 (zero) points.

When marking **(P)** or **(N)**, notes must be written in the comments field to explain why the laboratory did not comply. Where the checklist question does not apply, indicate as **(NA)**. The laboratory shall have documented justification for **(NA)**.

Add the sum of all main questions marked **(NA)** and subtract that sum of **(NAs)** from the total of 373. Since denominator has changed, the star level will then be determined using % score

Since denominator has changed, the star level will then be determined using % score.

SECTION 01: DOCUMENT AND RECORDS

For each question, please indicate as relevant, Yes (Y), Partial (P), No (N) or Not Applicable (NA). All elements of the question must be satisfactorily present to indicate Yes (Y). Provide comments for each Partial (P), No (N) or Not Applicable (NA). In the comment field, you may also provide information on what was audited, i.e., make reference to documentation, equipment, personnel, etc.

REQUIREMENTS	Y/P/N/ NA	Comment
1.1 Legal Entity Does the laboratory have documentation stating its legal identity?		Score /2
Note: Documentation could be in the form of a National Act, company registration certificate, license number or practice number, official letter from the Ministry of Health or equivalent institution to indicate that it belongs to the government.		
ISO15189:2022 Clause 5.1		
1.2 Laboratory Management System Policies and Objectives Is there a current document (quality manual or equivalent) that is composed of the management system policies and objectives and has the content being communicated and understood by all personnel? Note: A document (however named) must be available that		Score /3
summaries the laboratory's management system, which includes policies that address all areas of the laboratory service and identifies the goals and objectives of the Laboratory Management System.		
Does the document include the following elements?		
 Quality policy statement that includes scope of service, standard of service, measurable objectives of the laboratory management system, and management commitment to compliance to the implementation of the policies; 		
 Documented policies of the laboratory management system that meet the requirements of ISO15189:2022 and the requirements of the accreditation bodies (where relevant); 		
 Description of the laboratory management system and the structure of its documentation; 		
Note: A graphical representation of the hierarchy of the documents and what each level means is required.		
 d. Reference to supporting procedures (e.g., SOPs), including managerial and technical procedures; Note: The document number and/or document title is sufficient; a 		
link to the relevant folders may be used for a paperless system.		
 Description of the roles and responsibilities of the laboratory director (however named) and other key personnel responsible for ensuring compliance with the established organisational structure (organogram); 		
Note: The laboratory management must define its key personnel. f. Record of review and approval of this document		
(quality manual or equivalent) by authorised personnel;		
g. Records to show that relevant sections of this document were communicated to and understood by the relevant personnel (internal and external persons).		
Note: Internal personnel is any person indicated within the organisation.		
ISO15189:2022 Clause 5.5, Clause 8.1.1 and Clause 8.2		

1.3 Document and Information Control System	Score /2
Has the laboratory management established and	
implemented a document control system to control all	
documents and information from internal and external	
sources?	
Note: A document control system ensures that all documents	
(internal and external) are approved by authorised persons, current, reviewed periodically and revised as required.	
ISO15189:2022 Clause 8.3	
	Soore /2
1.4 Document and Records	Score /2
Are there records detailing all documents of the	
laboratory management system and indicating their	
editions and distribution?	
Note: Current authorised editions and their distribution are	
identified by means of a list (e.g., document register, log, or	
master index). "Edition" can be regarded as synonymous with	
"revision or version" number for the documents.	
ISO15189:2022 Clause 8.3	
1.5 Laboratory Management System	Score /2
Documentation	
Note: The management system documents can be contained in a	
quality manual; however, if the system is computerised, all files	
bearing the objectives and policies shall be linked.	
a. Has the laboratory management established,	
documented and maintained objectives and policies	
to fulfil the requirements of ISO 15189:2022	
standards?	
b. Are these objectives and policies acknowledged and	
implemented at all levels of the laboratory?	
ISO15189:2022 Clause 8.2	
1.6 Quality Document Accessibility	Score /2
Are quality documents (paper based and/or electronic	00016 72
copies) easily accessible, available and written in a	
language commonly understood and communicated to	
all relevant personnel?	
Note 1: This includes external personnel.	
Note 2: All documents must be current and approved by an	
authorised person. The documents can be in any form or type of	
medium provided that the documents are readily accessible and protected from unauthorised changes and undue deterioration.	
ISO15189:2022 Clause 8.2.5	
1.7 <u>Document Control Record</u>	Score /2
Do all quality documents have a record to reflect when it	
was approved for use, its review and revision history, its	
version, its location and when it was discontinued?	
ISO45490-2022 Clause 9 2	
ISO15189:2022 Clause 8.3	
1.8 <u>Discontinued Quality Documents</u>	Score /2
Are invalid or discontinued quality documents identified,	
clearly marked, removed from use and one copy	
retained for reference purposes?	
Note: Obsolete controlled desuments about he detect and montest	
Note: Obsolete controlled documents shall be dated and marked as obsolete. At least one copy of an obsolete controlled	
document is retained for a specified time or in accordance with	
applicable specified requirements.	
ISO15189:2022 Clause 8.3.	
1.9 Data Files	Score /2
	3001e /2
Are test results, technical and quality records archived	
for a specified period in accordance with the	
requirements of Section 9 of this checklist?	
Note: Copies or files of results should be archived. The retention	
period may vary; however, the reported results shall be	
, , , , , , , , , , , , , , , , , , , ,	

retrievable for as long as medically relevant or as required by national, regional, or local authorities.				
ISO15189:2022 Clause 8.4				
1.10 Archived Patient Results Accessibility Is there an archiving system that allows for easy and timely retrieval of patient results as per the requirements of Section 9 of this checklist? Note: Records can be in any form or type of medium, providing they are readily accessible and protected from unauthorised alterations. Archived patient results must be easily, readily and completely retrievable within a timeframe consistent with patient care needs.			Score	/2
ISO15189:2022 Clause 8.4				
SECTION 01: DOCUMENT AND RECORDS				/22

SECTION 02: ORGANISATION AND LEADERSHIP

For each question, please indicate as relevant, Yes (Y), Partial (P), No (N) or Not Applicable (NA). All elements of the question must be satisfactorily present to indicate Yes (Y). Provide comments for each Partial (P), No (N) or Not Applicable (NA). In the comment field, you may also provide information on what was audited, i.e., make reference to documentation, equipment, personnel, etc.

REQUIREMENTS	Y/P/N/ NA	Comment	
2.1 Procedure and/or Process for Organisational Code of Conduct Has the laboratory defined a procedure and/or a process that addresses, but is not limited to, the following?		Score /	/3
Adherence to organisational policies and procedures;			
b. Impartiality;			
c. Confidentiality;			
d. Conflicts of interest.			
ISO15189:2022 Clause 4.1			
2.2 Implementation of the Organisational Code of Conduct Has the laboratory implemented the procedure and/or process and does it have records of at least, but not limited to, the following? a. Adherence to organisational policies and procedures;		Score /	/2
b. Impartiality;			
c. Confidentiality;			
d. Conflicts of interest.			
ISO15189:2022 Clause 4.1	ı		
2.3 <u>Deputization</u> In the event of the absence of key personnel, has the laboratory implemented a process to ensure the continuity of the laboratory management system?		Score /	/2
ISO15189:2022 Clause 5.2.3			
2.4 <u>Budgetary Projections</u> Are budgetary projections based on personnel needs, scope of test, infrastructure, equipment needs, service and maintenance and quality assurance process and materials (IQC and EQA)?		Score /	/2
ISO15189:2022 Clause 8.2.3	•		
2.5 Routine Review of Quality and Technical Records Does the laboratory routinely perform a documented review of all quality and technical records? Note: There must be documentation that quality records are regularly reviewed and monitored by authorised person(s). This routine review (the laboratory must define their frequency of review, e.g., daily, weekly, monthly) must ensure that recurrent problems have been addressed and now or redesigned activities.		Score /	/3
problems have been addressed and new or redesigned activities have been evaluated.			
a. Follow-up of action items from previous reviews;			
 Status of corrective actions taken and required risk mitigation actions; 			
c. Reports from personnel;			
d. Environmental monitoring logs;			
e. Sample rejection records;			

f.	Equipment calibration and maintenance records;				
g.	IQC records across all test areas;				
h.	Outcomes of PTs and other forms of inter-laboratory comparisons;				
i.	Quality indicators;				
j.	Customer complaints and feedback;				
k.	Results of improvement projects;				
I.	Documentation of this routine review and action				
	planning with personnel for resolution and follow-up				
	review.				
	015189:2022 Clause 8.1 and Clause 8.4	ı	ı		10
	Procedure and/or Process for Management view			Score	/3
	s the laboratory defined a procedure and/or a				
pro	cess that addresses, but is not limited to, the				
foll	owing?				
rev	te: It is recommended that continued progress management iew meetings are held to ensure all actions arising are inpleted within the defined timeframe.				
a.	Frequency of management reviews;				
b.	Review input (agenda as per Clause 8.9.2 of ISO15189:2022);				
C.	Key attendees;				
d.	Conduct of review activities;				
e.	Review output (decisions, actions to be taken,				
	provision of required resources person responsible and due dates);				
f.	Communication of decisions and actions to be taken to the relevant persons;				
g.	Ensure all actions arising are completed within the defined timeframe.				
ISO	015189:2022 Clause 8.9				
	Conduct of Management Reviews			Score	/2
	es the laboratory management perform a review and				
	cussion of the laboratory management system at nned intervals?				
_	015189:2022 Clause 8.9				
2.8	Management Review Inputs			Score	/3
Do	es the management review meeting include the				
foll	owing inputs?				
	te: The minimum list of review inputs should include the uirements of Clause 8.9.2 (a-j) of ISO15189:2022.				
a.	Status of actions from previous management				
	reviews, internal and external changes to the management system, changes in the volume and				
	type of laboratory activities and adequacy of				
	resources;				
b.	Fulfilment of objectives and suitability of policies and procedures;				
C.	Outcomes of recent evaluations, process monitoring				
	using quality indicators, internal audits, analysis of non-conformities, corrective actions and				
	assessments by external bodies;				
d.	Patient, user and personnel feedback and				
	complaints;				
e.	Quality assurance of result validity;				
f.	Effectiveness of any implemented improvements and actions taken to address risks and opportunities for improvement:				

g. Performance of external providers, including referral laboratories and technical consultants;		
 Results of participation in interlaboratory comparison programs; 		
i. Evaluation of POCT activities;		
j. Other relevant factors, such as monitoring activities and training.		
ISO15189:2022 Clause 8.9		
2.9 Management Review Outputs Does the management review meeting include the following outputs? Note: The interval between management reviews should be no greater than 12 months; however, shorter intervals should be adopted when a Laboratory Management System is being	Score	/2
established.		
Effectiveness of the management system and its processes:		
b. Improvement of the laboratory activities related to the fulfilment of the requirements of this document;		
c. Provision of required resources;		
d. Improvement of services to patients and users;		
e. Any need for change.		
ISO15189:2022 Clause 8.9		
2.10 Communication of Review Findings Are findings and actions from routine technical and management review meeting communicated to the relevant personnel? Note: Findings and actions arising from management reviews	Score	/2
shall be recorded and reported to laboratory personnel.		
ISO15189:2022 Clause 8.9.3	0.000	10
2.11 Completion and Monitoring of Review Action Items Does laboratory management ensure that actions from routine technical review and management review meetings are completed within defined timeframes and monitored for their effectiveness?	Score	/2
Note: Laboratory management shall ensure that actions arising from management review and other management meetings are completed within a defined period.		
ISO15189:2022 Clause 8.9.3		
SECTION 02: ORGANISATION AN	ID LEADERSHIP 12	26

SECTION 03: PERSONNEL MANAGEMENT

For each question, please indicate as relevant, Yes (Y), Partial (P), No (N) or Not Applicable (NA). All elements of the question must be satisfactorily present to indicate Yes (Y). Provide comments for each Partial (P), No (N) or Not Applicable (NA). In the comment field you may also provide information on what was audited, i.e., make reference to documentation, equipment, personnel, etc.

REQUIREMENTS	NA	Comment	
3.1 Procedure and/or Process for Personnel		Score	/3
<u>Management</u>			
Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the			
following?			
Tollowing:			
Note: The laboratory must have a documented procedure for			
personnel management and maintain records for all personnel to indicate compliance with requirements.			
a. Definition of the structure of the organisation			
(organisational plan) based on the needs of the			
laboratory activities;			
b. Definition of job profiles and job descriptions for all			
laboratory positions; c. Selection and recruitment of appropriately			
qualified personnel;			
d. Orientation of newly recruited and appointed			
personnel;			
e. Establishment and maintenance of personnel			
records.			
ISO15189:2022 Clause 6.2.1			
3.2 <u>Duty Roster and Daily Routine</u>		Score	/2
Does the laboratory have a duty roster that covers			
normal hours and after hours?			
Note: A duty roster designates specific laboratory personnel to			
specific workstations. Daily routines should be prioritised, organised and coordinated to achieve optimal service delivery			
for patients.			
ISO15189:2022 Clause 6.2.1			
3.3 Organisational Chart and External/Internal		Score	/2
Reporting Systems			
Is an organisational chart available for indicating the			
relationship between the laboratory and its parent			
organisation?			
Note: An up-to-date organisational chart and/or narrative			
description should be available detailing the external and internal reporting relationships for laboratory personnel. The			
organisational chart or narrative should clearly show how the			
laboratory is linked to the rest of the hospital and laboratory services where applicable.			
ISO15189:2022 Clause 5.4.1			
3.4 Laboratory Management		Score	/3
Is the laboratory directed by a person(s) (however			
named) with specified qualifications, authority,			
competency and delegated responsibility to perform			
the following:			
Note: A laboratory director may be a person or persons with			
responsibility for and authority over a laboratory. The person			
or persons referred to may be designated collectively as the Laboratory Director. Other settings may not use the term			
'Laboratory Director' but in this question, it refers to			
person/persons that are running the laboratory. a. Provide effective leadership, budgeting and			
planning;			
b. Communicate with stakeholders;			
c. Ensure adequate competent personnel;			
1 1 1 1			

d. Ensure the implementation of the quality	
management system; e. Select and monitor laboratory supplies;	
f. Select and monitor referral laboratories;	
g. Ensure a safe laboratory environment;	
h. Provide advisory services;	
Provide professional development programmes for	
laboratory personnel;	
j. Address complaints, requests, or suggestions from personnel and or laboratory users;	
k. Ensure the implementation and application of risk assessment program;	
Design and implement a contingency plan based on the risk assessment program;	
m. Ensure management and operations of POCT activities.	
ISO15189:2022 Clause 5.2.1, Clause 5.2.2 and Clause 5.4.2	
3.5 Compliance with Laboratory Management	Score /2
System	
Is there a person or persons who, irrespective of other responsibilities, have the authority and resources	
needed to carry out their duties, including:	
, , , , ,	
Note: These roles and responsibilities (quality officer or team) shall be defined, documented, and communicated (e.g., job description, organogram etc.).	
a. Implementation, maintenance, and improvement	
of the management system; b. Identification of deviations from the management	
system or from the procedures for performing	
laboratory activities.	
ISO15189:2022 Clause 5.4.2	
3.6 Procedure and/or Process for Authorisation Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following?	Score /3
Note: Authorisation may be in the form of a job description, letter of appointment, approved authority matrix, etc.	
a. List of activities that require authorisation;	
 Defined criteria for authorising persons for specific laboratory activities; 	
c. Documented authorisation for the various activities;	
d. Appointed deputies for the key positions where	
appropriate. ISO15189:2022 Clause 6.2.3	
3.7 Authorisation	Score /2
Are personnel authorised to perform specific laboratory activities including, but not limited to, the following:	Score 12
Selection, development, modification, validation, and verification of methods;	
b. Review, release, and reporting of results;	
c. Use of laboratory information systems, particularly	
accessing patient data and information, entering	
patient data and examination results, and	
changing patient data or examination results.	

_	rocedure and/or Process for Personnel		Score	/3
<u>Traini</u>				
	ne laboratory defined a procedure and/or			
	ss that addresses, but is not limited to, the			
follow	ing ?			
	Fraining includes external and internal trainings.			
a. Ide	entification of training needs;			
	stablishment of training programme (including tial and refresher training);			
	rovision of a continuous education program;			
	ecording of training;			
	•			
	valuation of the effectiveness of the training ogram.			
	189:2022 Clause 6.2			
3.9 L	aboratory Personnel Training, Continuing	T	Score	/2
_	Education and Professional Development			
	re a programme for training, continuing			
	ation and professional development including,			
	ot limited to, the following:			
a. La	aboratory management system;			
b. In	duction to the organisation;			
c. As	ssigned work processes, procedures, and tasks;			
d. Ap	oplicable laboratory information system;			
	ealth and safety, including the prevention or ontainment of the effects of adverse incidents;			
	aboratory ethics, impartiality and confidentiality of			
	atient information;			
g. Su	upervision of persons undergoing training,			
h. Co	ontinuous education (advancement in laboratory			
	actice, clinical diagnostics, surveillance, etc.);

5.11 Equipment Calibration and Metrological	Score /3
Traceability	
Note: Documentation of calibration traceability to a higher order reference material or reference procedure may be provided by an examination system manufacturer. Such documentation is acceptable if the manufacturer's examination system and calibration procedures are used without modification.	
a. Is routine calibration of laboratory measuring	
equipment (including pipettes, centrifuges, balances,	
and thermometers) scheduled, at minimum following manufacturer's recommendations?	
b. When routine calibration of laboratory measuring	
equipment (including pipettes, centrifuges, balances,	
and thermometers) is performed offsite (externally),	
are there records of verification before use?	
 Is information on metrological traceability (e.g., use of reference materials and equipment like certified 	
thermometers, tachometer) available?	
,	
Note: Calibration certificates, calibration reports, etc. may be used as records of metrological traceability information.	
d. Is there evidence of review of calibrations records	
(e.g., calibration certificates, calibration reports, etc.)	
by the laboratory before acceptance back into use? e. Where it is not possible to provide traceability using	
e. Where it is not possible to provide traceability using an accredited calibration laboratory, are certified	
reference materials, examination and calibration by	
another procedure, use of mutual consent standards	
or methods used for in house calibrations?	
ISO15189:2022 Clause 6.5.3 c)	
5.12 Equipment Preventive Maintenance	Score /2
Is routine user preventive maintenance performed on all equipment and recorded according to manufacturer's	
minimum requirements?	
·	
Note: Preventative maintenance by operators must be done on all	
equipment used in examinations including centrifuges, autoclaves, microscopes, and safety cabinets.	

5.13 Equipment Service Maintenance Is equipment routinely serviced according to a schedule as per the minimum manufacturer's recommendations by approved internal or external service providers and is this information documented in appropriate logs? Note: All equipment must be serviced at specified intervals by a qualified service engineer either through service contracts or otherwise. Service schedules must at minimum meet manufacturer's requirements ISO15189:2022 Clause 6.4.5		Score	/2
5.14 Equipment Adverse Incident Reporting.		Score	/2
2.14 Equipment Adverse including reporting.		00010	,,
Are there records of investigation, identification and implementation of corrective actions taken and follow-up?			
b. Is there documentation of reports made to manufacturers or suppliers and appropriate authorities of adverse incidents and accidents where applicable?			
ISO15189:2022 Clause 6.4.6			
5.15 Manufacturer's Operator Manual Are the manufacturer's operator manuals readily available to testing personnel and available in the language understood by personnel?		Score	/2
ISO15189:2022 Clause 6.4.4			
5.16 <u>Use of Equipment</u> Are there precautions (e.g., password protection) in place to prevent unintended adjustments of automated equipment, where applicable?		Score	/2
ISO15189:2022 Clause 6.4.4

For each question, please indicate as relevant, Yes (Y), Partial (P), No (N) or Not Applicable (NA). All elements of the question must be satisfactorily present to indicate Yes (Y). Provide comments for each Partial (P), No (N) or Not Applicable (NA). In the comment field you may also provide information on what was audited, i.e., make reference to documentation, equipment, personnel, etc.

REQUIREMENTS	NA	Comment	
6.1 Procedure and/or Process for Internal Audits Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following?		Score /3	3
Note 1: Inputs into planning, scheduling and conduct of internal audits may include: i. Priority given to risk posed to patients resulting from laboratory activities; ii. Identified risks; iii. Outcomes of both external evaluations and previous internal			
iv. Occurrence of nonconformities, incidents, and complaints; v. Changes affecting the laboratory activities.			
Note 2: The cycle for internal auditing should normally be completed in one year. It is not necessary that internal audits cover each year, in depth, all elements of the Laboratory Management System.			
 a. Inputs into planning, scheduling, and conduct of internal audits; 			
b. Scheduling of internal audits;			
c. Frequency of internal audits;			
d. Scope of internal audits;			
e. Criteria for internal audits;			
f. Selection of internal auditors;			
g. Recording of audit findings;			
h. Addressing identified nonconformities;			
i. Implementation of corrective actions;			
j. Monitoring of the effectiveness of corrective actions.			
ISO15189:2022 Clause 8.8.3			
6.2 <u>Internal Audits</u> Are internal audits conducted at intervals as defined in the internal audit programme and do these audits address all areas of the laboratory management systems?		Score /3	3
Note: The cycle for internal auditing should normally be completed in one year and at planned intervals.			
Is there an audit programme that ensures all activities of the laboratory are audited?			
Note: Internal auditing shall cover all activities in the Laboratory Management System, including pre-examination, examination, and post-examination			
a. Are audits being carried out with minimal conflict of interest where possible, carried out by persons who are not involved in activities in the section being audited?			
b. Are the personnel conducting the internal audits trained, qualified, and authorised to conduct internal audits?			
c. Are internal audit findings documented and presented to laboratory management and relevant personnel for review?			
ISO15189:2022 Clause 8.8.3			
6.3 Audit Recommendations and Action Plan and		Score /:	3
Follow-up			

a.	Are internal audits reports generated, disseminated, and communicated to laboratory management and relevant personnel for review?				
b.	Is an action plan developed with clear timelines,				
0.	assigned personnel and documented follow-up within the timeframe defined by laboratory management?				
C.	Are recommendations for improvement actions made				
	based on audit findings?				
	te: For actions that are not implemented as per the due dates there ould be a motivation and an approval of extension.				
	015189:2022 Clause 8.8.3				
	s the laboratory defined a procedure and/or process that			Score	/3
	dresses, but is not limited to, the following?				
	te: Risk must be managed at the pre-examination processes, amination processes and post-examination processes. The				
lab	oratory shall evaluate the impact of work processes and potential				
mo	ures on examination results as they affect patient safety and shall dify processes to reduce or eliminate the identified risks and				
	cument decisions and actions taken. Risk management must take consideration patient care and laboratory activities.				
a.	Methods used to identify risks and opportunities;				
b.	Areas for identifying risks and opportunities associated with its examinations and activities;				
C.	Development of action plans to address both risks and opportunities for improvement;				
d.	Evaluation of the effectiveness of implemented actions and modification where required;				
e.	Recording and communication of decisions made, and actions taken on risks and opportunities.

REQUIREMENTS	NA	Comment		
7.1 Procedure and/or Process for Externally Provided Products and Services Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following?			Score	/3
Selection of required products and services;				
b. Establishment of selection criteria;				
c. Establishment of acceptance criteria;				
d. Selection, approval of suppliers and technical consultants;				
e. Maintenance of approved suppliers list;				
 f. Defining the requirements of its purchase supplies and services (purchase documentation); 				
g. Reviewing and monitoring of the performance of its approved suppliers;				
h. Frequency of reviewing and monitoring the performance.				
ISO15189:2022 Clause 6.8	T	T	0	/0
7.2 Procedure and/or Process for Purchasing and Inventory Control of Equipment, Reagents, and Consumables Has the laboratory defined a procedure and/or process that			Score	/3
addresses, but is not limited to, the following? a. Requisition, ordering and receipt of purchased items;				
b. Establishment of acceptance and rejection criteria for				
purchased items;				
c. Acceptance testing;				
d. Storage of purchased items;				
e. Management of inventory;				
f. Monitoring and handling of expired items;				
g. Responding to manufacturers recall or other notices.				
ISO15189:2022 Clause 6.8.3				
7.3 Inventory and Budgeting System (Including the requirements for POCT) Is there a process for accurately forecasting needs for services, supplies and reagents?			Score	/2
Note 1: External services include referral laboratories and consultants.				
Note 2: The laboratory must have a systematic way of determining its supply and testing needs through inventory control and budgeting systems that take into consideration past patterns, present trends, and future plans.				
ISO15189:2022 Clause 6.6.1				
7.4 Purchasing Specifications Does the laboratory provide specifications for their services, supplies and consumables that are required when placing a requisition?			Score	/2
Note: Specification could be in the form of catalogue number, item number, manufacturer name, etc.				
ISO15189:2022 Clause 6.6.1				

7.5 Service Supplier Performance Review	Score /2
Does laboratory management monitor the performance of	,_
external suppliers (including referral laboratories, technical	
consultants, and EQA providers) to ensure that they	
continually meet the stated criteria of the approved	
suppliers?	
Note: All suppliers of services used by the laboratory must be	
reviewed and monitored for their performance.	
ISO15189:2022 Clause 6.8.3 a) and c)	
7.6 Inventory Control	Score /3
Does the laboratory maintain records for each reagent and	
consumable that contributes to the performance of	
examinations? These records shall include but not be limited	
to the following:	
a. Identity of the reagent or consumable;	
b. Batch code or lot number;	
c. Manufacturer or supplier name and contact information;	
d. Received date, expiration date, date of entry into service	
and date material was taken out of service, where	
applicable; e. Manufacturer's instruction/package insert;	
 f. Records of inspection of reagents and consumables when received (e.g., acceptable or damaged); 	
Note: All incoming orders must be inspected for condition and	
completeness of the original requests, receipted, and documented appropriately, date received in the Laboratory and expiry date for the	
product should be clearly indicated.	
g. Reference to the person or persons undertaking the	
preparation of reagents, resuspension or combined in-	
house, as well as the dates of preparation and stability.	
Note: The above the information(a-g) may be captured on the actual item but is also required to be captured on the inventory log.	
ISO15189:2022 Clause 6.6.7	
7.7 Management Review of Supply Requests	Score /2
Does laboratory management review and approve the	
laboratory's requirements for all externally provided products	
and services?	
Note: Since laboratories have different purchasing approval systems,	
there should be a system in place that the laboratory reviews final	
approval of their original request. ISO15189:2022 Clause 6.8.3	
7.8 <u>Laboratory Inventory System</u>	Score /2
7.0 <u>Laboratory inventory dystem</u>	00010 72
Note: The laboratory inventory system should reliably inform personnel of the minimum amount of stock to be kept to avoid	
interruptions of service due to stock-outs and the maximum amount	
to be kept by the laboratory to prevent expiry of reagents.	
a. Are inventory records complete and accurate with	
minimum and maximum stock levels denoted and	
monitored?	
b. Is the consumption rate of all reagents and consumables monitored?	
c. Are inventory/stock counts routinely performed?	
ISO15189:2022 Clause 6.6.4	
7.9 Storage Area	Score /2
Are storage areas set up and monitored appropriately?]
Note: Storage of supplies and consumables must be as per the	
manufacturer's specifications.	
a. Is the storage area well-organised and free of clutter to prevent damage and deterioration?	

b.	Are there designated places for all inventory items for easy access (separation of inspected and uninspected items)?				
C.	Is adequate cold storage available?				
d.	Is the humidity of the room monitored routinely, when appropriate?				
e.	Is the temperature of the room monitored routinely?				
f.	Is storage in direct sunlight avoided? Is direct sunlight avoided in storage areas?				
g.	Is the storage area adequately ventilated?				
h.	Is the storage area clean and free of dust and pests?				
i.	Are storage areas access-controlled?				
ISC	15189:2022 Clause 6.6.2				
ls l	Inventory Organisation and Wastage Minimisation First-Expiration-First-Out (FEFO) practiced? The Tominimise wastage from product expiration, inventory should arranged in line with the FEFO principle. Place product that will be a product to the principle.			Score	/2
exp sto exp	organised in line with the FEFO principle. Place products that will bire first in front of products with a later expiration date and issue ck accordingly to ensure products in use are not past their biration date. Remember that the order in which products are eived is not necessarily the order in which they will expire.				
ISC	15189:2022 Clause 6.6.4; QMS 01, WHO 2013				
Are wit	1 Product Expiration e all reagents/test kits in use (and in stock) currently hin the manufacturer-assigned expiration or within bility?			Score	/2
	te 1: All reagents and test kits in use, as well as those in stock, buld be within the manufacturer-assigned expiry dates.				
No	te 2: Expired controls and calibrators must not be used.				
	15189:2022 Clause 6.6.5				
	Disposal of Expired Products expired products labelled and disposed of properly?			Score	/2
ma ma	te: Expired products should be disposed of properly and records intained. If safe disposal is not available at the laboratory, the nufacturer/supplier should take back the expired stock at the time heir next delivery.

REQUIREMENTS	NA	Comment	
8.1 Procedure and/or Process for Continuity and Emergency Preparedness Planning (Contingency Plan) Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following activities and measures to address and mitigate the consequences of any event that leads to interruptions of services including but not limited to:		Score	/3
Notes: Contingency plans should be periodically tested. Where the laboratory uses another laboratory as a backup, the performance of the back-up laboratory shall be regularly reviewed including contingency plans in the event of failure of the back-up laboratory. a. Personnel;			
b. Equipment breakdown;			
c. Power outages;			
d. Stock outs of reagents and consumables;			
e. Fire, natural disasters, e.g., severe weather or floods, bomb threats or civil disturbances			
ISO15189:2022 Clause 7.8; CLSI GP36-A			
8.2 Implementation of Continuity and Emergency Preparedness Planning		Score	/3
As laboratory management developed and implemented a continuity and emergency preparedness plan covering all laboratory operations (including inputs from risk assessments, internal audits, management reviews, safety audits, etc.			
b. Is the continuity and emergency preparedness plan periodically tested for its continued effectiveness and are actions taken to address any identified gaps?			
c. Are there records of monitoring the effectiveness of the continuity and emergency preparedness plan?			
d. Has the continuity and emergency preparedness plan been communicated and training provided to all relevant laboratory personnel?			
ISO15189:2022 Clause 7.8			
8.3 Procedure and/or Process for Pre-examination Processes Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following? Note: The laboratory must have documented procedures and information for pre-examination activities to ensure the validity of the results of examinations		Score	/3
Location(s) of the laboratory, operating hours, and contact information;			
 Procedures for requesting and collection of patient samples; 			
c. Instructions for collection activities (including sample, volume, and transportation requirements);			
d. Instructions for pre-collection activities;			
e. Preparation and storage prior to dispatch to the laboratory;			

f.	Scope of laboratory activities and time for expected laboratory results;			
g.	Time limits and special handling of patient samples;			
h.	Patient sample acceptance and rejection criteria;			
i.	Factors known to significantly impact the performance			
	of examinations or interpretation of results;			
j.	Availability of advisory services;			
k.	Requirements for patient consent;			
l.	Ensuring patient confidentiality;			
m.	Complaints procedure.			
ISC	015189:2022 Clause 7.2			
	Instructions for Collection Activities		Score	/3
	e records available to show implementation of the			
	owing: Verification of the identity of the patient from whom a			
	primary sample is collected;			
b.	Verification and, when relevant, recording that the			
	patient meets pre-examination requirements (e.g., fasting status, medication status [time of last dose,			
	cessation], sample collection at predetermined time or			
	time interval);			
C.	Collection of primary samples, with descriptions of the primary sample containers and any necessary			
	additives, as well as the order of sample collection,			
	where relevant;			
d.	Labelling of primary samples in a manner that			
	provides an unequivocal link with the patient from whom they are collected;			
e.	Recording of the identity of the person collecting the			
	primary sample and the collection date, and, when			
	relevant, recording of the collection time;			
f.	Requirements for separating or dividing the primary sample, when necessary;			
g.	Stabilisation and proper storage conditions before			
	collected samples are delivered to the laboratory;			
h.	Safe disposal of materials used in the sample collection process.			
ISC	015189:2022 Clause 7.2.4.4			
	Test Request		Score	/3
	es the laboratory adequately collect information needed			
tor	examination performance?			
	te 1: Each request accepted by the laboratory for examination(s)			
	Ill be considered an agreement. The request may be paper-based electronic-based;			
No	te 2: The review of service agreements occurs on sample			
	eption. All portions of the primary sample must be equivocally traceable to the original primary sample.			
	Are all test requests accompanied by an acceptable			
	and approved test requisition (e.g., a transmittal			
	sheet/checklist/manifest/request form where applicable)?			
b.	Does the request include patient identifiers, including			
	gender, date of birth, location of patient and unique			
	identifier?			
C.	Name, initials, and signature (where applicable) of authorised requester;			
d.	Type of sample and examination requested;			

e.	Clinically relevant information;	
f.	Date of sample collection (may include time where	
	appropriate);	
g.	Date and time of sample receipt (pre-analytical);	
h.	Informed consent when required.	
ISC	015189:2022 Clause 4.3 and Clause 7.2.4.4	
	Primary Sample Receipt Procedure	Score /3
	es the laboratory implement the sample receipt occdures and are there records of implementation of the	
	owing:	
a.	Unique patient identifier;	
b.	Are received samples evaluated according to acceptance and rejection criteria?	
C.	Are samples logged appropriately upon receipt in the laboratory (including date of receipt, time of receipt, and name of receiving personnel)?	
d.	Are procedures in place to process 'urgent' samples?	
e.	Are procedures in place to process oral requests?	
f.	When samples are split, can the portions be traced back to the primary sample?	
g.	Are samples delivered to the correct workstations as per the laboratory processes?	
ISC	015189:2022 Clause 7.3.2	
	Pre-examination Handling, Processing and	Score /2
	orage	
	or to testing, are samples handled, processed, and ared according to specific sample type stability and	
	ting requirements?	
No	te: Samples should be stored under the appropriate conditions	
to I	maintain the stability of the sample according to international	
	st practice and or testing guidelines. 015189:2022 Clause 7.2.7	
	Sample Transportation	Score /2
No: tha cor the spe	te: All samples shall be transported to the laboratory in a manner t is safe to patients, users, personnel (including transporters), mmunity and the environment. The laboratory must ensure that samples were received within a temperature and time interval ecified for sample collection.	
a.	Are samples either received at the laboratory or	
	referred to another site, packaged according to national guidelines/regulations?	
b.	When specimens are transported across borders (i.e.,	
	internationally) is the packaging and transportation in	
	full compliance with international (e.g., IATA) regulations?	
C.	Are samples transported within acceptable timeframe	+ +
	and temperature intervals?	
d.	Are specimens packaged according to national regulations when either received at the laboratory or referred to another site?	
ISC	215189:2022 Clause 7.2.5	
	Procedure and/or Process for Referral	Score /3
	Laboratories and Technical Consultants	
	s the laboratory defined a procedure and/or process	
tha	at addresses, but is not limited to, the following?	
a.	Defining criteria for referral laboratories and technical consultants;	

b. Selection and approval of referral laboratories;	
c. Technical consultants who provide advice and interpretation;	
d. Evaluation and monitoring of the performance of referral laboratories and technical consultants;	
Maintenance of a list of approved referral laboratories and technical consultants;	
f. Maintenance of records of referred samples;	
g. Tracking of referred samples and their results;	
h. Reporting of results from referral laboratories;	
 Management of critical results received from referral laboratories; 	
j. Packaging and transportation of referred samples;	
k. Record of communication of results from referral laboratories and technical consultants.	
ISO15189:2022 Clause 6.8.2	
8.10 Referral Laboratories and Technical Consultants	Score /2
Note: The laboratory must have systems in place to ensure that the referral laboratories are competent to perform the services required. Evaluations may be in the form of checking their accreditation status, using a questionnaire, performing audits, use of blinded samples, etc.	
Does the laboratory select referral laboratories and technical consultants based on specific criteria?	
b. Are there documented reviews and evaluations of referral laboratories and technical consultants as defined by the laboratory?	
c. Is there a register of referral laboratories and technical consultants?	
d. Are referred samples tracked properly using a logbook, tracking form or electronically?	
e. Does the laboratory ensure that the results obtained by the referral laboratory are tracked to ensure timely delivery to the user?	
ISO15189:2022 Clause 6.8.2	
8.11 Procedure and/or Process for Documentation of Examination Procedures Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following?	Score /2
Note: Working instructions, job aids, flow process diagrams or similar systems that summarise key information are acceptable for use as a quick reference at the workbench, provided that a fully documented examination procedure (e.g., SOP) is available for reference. Information from product instructions for use can be incorporated into examination procedures by reference in the SOP.	
Defining the format, language, and appropriate location of examination procedures;	
b. Selection and approval of referral laboratories.	
ISO15189:2022 Clause 7.3.6	
8.12 Location of Examination Procedures Are examination information and instructions available in appropriate locations?	Score /2

Analysis of the reagent.	
ISO15189:2022 Clause 6.6.3	
8.14 Procedure and/or Process for Internal Quality Control (IQC) Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following? Note: The laboratory should choose concentrations of control	Score /3
materials, wherever possible, especially at or near clinical decision values, which ensure the validity of decisions made. Use of independent third-party control materials should be considered, either instead of, or in addition to, any control materials supplied by the reagent or instrument manufacturer.	
a. Definition of IQC criteria (acceptance and rejection);	
b. Frequency of processing IQC;	
 Definition of acceptable ranges (package inserts or in house); 	
d. Use of alternate quality control methods when appropriate quality controls are not available (in-house produced IQC materials, EQA materials, etc.);	
e. Recording, evaluating, and monitoring ongoing IQC performance;	
f. Troubleshooting unacceptable IQC performance.	
ISO15189:2022 Clause 7.3.7	
8.15 Quality Control	Score /3
 a. Is internal quality control performed and verified to be within acceptable limits before testing and release of results? 	
b. Is corrective action taken and documented when quality control results fall outside the acceptable range and reviews identify non-conformities in a timely manner?	
c. Does the laboratory evaluate the results from patient samples that were examined after the last successful quality control result in the event of a quality control failure?	
ISO15189:2022 Clause 7.3.7.2	
8.16 Monitoring of Quality Control Performance	Score /3
a. Are quality control results monitored and reviewed to assess the performance of the method and/or identify errors over time for quantitative tests?	
Note: Monitoring of quality controls can include biases, trends, and Levy-Jennings charts.	
b. Is appropriate action taken and documented when there is an error or rule violation with the quality control results?	
Note: The laboratory must document and implement a system it would use to evaluate patient results since the last successful quality control. The evaluation could be done by re-examining selected samples of various batches or re-examining samples as per the stability of the quality control. ISO15189:2022 Clause 7.3.7.2	

8.1	7 Comparability of Examination Results		Score	/2
	es the laboratory compare results to ensure there is no			
	ically significant variation when the same test for a			
	ient sample is performed with different methods or			
equ	uipment, including POCT?			
Not	e: The laboratory should document and implement a system to			
	ure there is comparability of results. This could be done using A performance, using blinded samples, and parallel testing.			
a.	Does the laboratory record the results of comparability			
	performed and its acceptability?			
b.	Does the laboratory periodically review the			
	comparability of results?			
C.	Does the laboratory evaluate and act upon the impact			
	of any differences on biological reference intervals and			
	clinical decision limits?			
d.	Does the laboratory inform users of any clinically significant differences in comparability of results?

8.25 Procedure and/or Process for Measurement	Score /2
Uncertainty (MU)	
Has the laboratory defined a procedure and/or process	
that addresses, but is not limited to, the following?	
Note: MU is used to indicate the confidence we have that the	
reported figure is correct. MU may be calculated using the	,
calculated coefficient of variation (CV) of at least 30 sets of internal precision quality control data: CV% x 2 = MU.	<u>'_ </u>
a. Determining MU (analytical error) on measured	
quantity values (quantitative tests);	
b. Defining performance requirements for MU.	
ISO15189:2022 Clause 7.3.4; ISO/TS 20914:2019	
8.26 Measurement Uncertainty of Measured	Score /3
Quantitative Tests	
Does the laboratory have documented estimates of MU	
for each semi-quantitative and quantitative test in use?	
Note: MU should be calculated at different clinical decision limits.	
Cumulative IQC (minimum 6 months data) may be used to calculate	;
a. Has the laboratory calculated MU for each quantitative	;
test in use?	· [
	i i
Note: If quantitative values are used to decide a qualitative result, then MU must be performed.	
b. Has the laboratory defined the performance	
requirements (factors that affect MU) for the MU of	
each measurement examination and does the	
laboratory regularly review estimates of MU?	+ +
c. Does the laboratory make its calculated MU available	
to its users upon request?	
d. Does the laboratory document reasons for exclusion	
from MU estimation for examination procedures where	;
evaluation of MU is not possible or relevant?	
ISO15189:2022 Clause 7.3.4	
8.27 Procedure and/or Process for Biological	Score /3
Reference Intervals or Clinical Decision Limits	
Has the laboratory defined a procedure and/or process	
that addresses, but is not limited to, the following?	
Note: The laboratory shall define the biological reference intervals	
or clinical decision values, document the basis for the reference intervals or decision values and communicate this information to	
users.	
a. Defining biological reference intervals or clinical	
decision limits;	+
 Biological reference intervals for examinations that identify presence or absence of a characteristic; 	
c. Source of reference intervals or clinical decision limits;	;
d. Communication of changes of biological reference intervals or clinical decision limits to users.

9.4 Requirements for Reports Does the laboratory report contain at least the following:			Score	/3
Clear, unambiguous identification of the examinations performed (including POCT reports);				
b. Identification of the laboratory issuing the report;				
 Identification of all examinations performed by a referral laboratory or part of a research or development program; 				
d. Patient identification, location, date of primary sample collection (and time, relevant to patient care), date of				
issue on every page of the report;				
e. Name of the requester (user);				
f. Identification of examination method used, where relevant, and including, where possible and necessary, harmonised (electronic) identification of the measurand and measurement principle;				
g. Type of primary sample and any specific information necessary to describe the sample;				
Note: (e.g., source, site of sample, macroscopic description, etc.)				
h. Provisional reports;				
i. Reporting of result in SI units, when applicable;				

j.	Biological reference intervals, clinical decision limits, likelihood ratios;			
k.	Presence of space for interpretation or comments of			
	results, when applicable;			
I.	Indication of critical results;			
m.	Identification of the person(s) reviewing and authorizing the release of the report;			
n.	Date and time of the report;			
0.	Page number to total number of pages (e.g., 'Page 1 of 5');			
p.	Clear identification of revisions, including reference to the date and patient identity on the original report, and user notification of the revision, when issuing revised reports;			
q.	Revised record shows time and date of change and name of the person responsible for the change;			
Not	•			
	e: When the reporting system cannot capture amendments, nges or alterations, a record of such shall be kept.			
r.	Does the original report entry remain in the record?			
Not	e: Applicable to paper- and electronic-based systems.			
	015189:2022 Clause 7.4.1.6

SECTION 10: NONCONFORMING EVENT MANAGEMENT

REQUIREMENTS	Y/P/N/ NA	Comment		
10.1 Procedure and/or Process for Handling of Nonconforming Work, Nonconformities and			Score	/3
Corrective Action				
Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following?				
a. Identification of nonconforming work and				
nonconformities in any aspect of the laboratory management system;				
b. Documentation of nonconforming work and				
nonconformities; c. Determination of level of risk and evaluation of the				
impact;				
d. Performing root cause analysis;				
e. Determination of the need for corrective action (how and where);				
f. Assignment of roles and responsibilities for recalling,				
resolving and resumption of the nonconforming work				
and nonconformities; g. Determining time frame for resolving nonconforming				
work and nonconformities;				
h. Implementation of corrective action (including halting				
examinations and recalling of released results, where applicable);				
i. Monitoring, reviewing and evaluating the effectiveness				
j. Retention of records of nonconforming work and				
nonconformities.				
ISO15189:2022 Clause 7.5 and Clause 8.7				
10.2 Identification and Management of			Score	/3
Nonconforming Work and Nonconformities				
Note: Nonconformities should be identified and managed in any aspect of the laboratory management system, including pre-				
examination, examination, or post-examination processes.				
Nonconforming examinations or activities occur in many different areas and can be identified in many ways, including clinician				
complaints, internal quality control indications, instrument				
calibrations, checking of consumable materials, inter-laboratory comparisons, personnel comments, reporting and certificate				
checking, laboratory management reviews, and internal and external audits.				
Are nonconforming work and nonconformities documented				
as required below:				
a. Investigation and determination of the root cause (root cause analysis), and conduct of risk assessment (to				
determine the level of risk and the need for action);				
Note: Root cause analysis is a process of identifying and removing				
the underlying factor of the nonconformance.				
b. Actions (immediate and corrective) taken to control				
and/or correct the nonconformity or non-conforming work;				
Note 1: Are examinations halted and results withheld or recalled where the nonconformity compromises patient results?				
Note 2: Informing the requester where nonconforming work/nonconformity influences the management of the patient.				

Follow up and review of actions to assess effectiveness. Note: Implemented corrective action does not imply effectiveness; therefore, the laboratory must monitor to ensure that the		
nonconformity has not recurred. ISO15189:2022 Clause 7.5 and Clause 8.7		
10.3 Records of Identification and Management of Nonconforming Work and Nonconformities Are there records of communication to the requester where nonconforming work or a nonconformity influences the management of the patient?	Score	/2
ISO15189:2022 Clause 7.5		
10.4 Resumption of Testing Is authorisation for the resumption of testing documented (where testing has been halted)?	Score	/2
ISO15189:2022 Clause 7.5		
10.5 <u>Corrective Action</u> Is corrective action performed and documented for nonconforming work or nonconformities?	Score	/3
ISO15189:2022 Clause 8.7		
SECTION 10: NONCONFORMING E	VENT MANAGEMENT	/13

SECTION 11: CONTINUAL IMPROVEMENT

REQUIREMENTS	Y/P/N/ NA	Comment
11.1 Procedure and/or Process for Continual	1474	Score /3
Improvement		
Has the laboratory defined a procedure and/or process		
that addresses, but is not limited to, the following?		
Note: Improvement activities must be identified within the pre- examination, examination, and post-examination processes. Laboratory management shall ensure that the laboratory participates in continual improvement activities that encompass relevant areas and outcomes of patient care and results records.		
a. Identification of improvement activities within the		
laboratory management system;		
b. Development and documentation of improvement		
plans;		
c. Communication of improvement plans and related		
goals to relevant personnel;		
d. Implementation of action plans;		
e. Recording of improvement plans;		
f. Evaluation of effectiveness of actions taken.		
ISO15189:2022 Clause 8.6.1 and Clause 8.5		
11.2 Implementation of Continual Improvement of Management System Does the laboratory identify and undertake continual quality improvement activities? Note: The laboratory should use its management review activities to continually improve its laboratory management system by comparing its actual performance to its intentions stated in the quality policy and objectives.		Score /2
ISO15189:2022 Clause 8.6		
11.3 Communication of Continual Improvement Activities Are the outcomes of continual improvement activities communicated to laboratory management, personnel, and users?		Score /2
Note 1: The communication can be done using graphical tools (such as charts, graphs, tables) and in personnel and management meetings.		
Note 2: Examples of graphical tools commonly used for this purpose include LJ charts, Pareto charts, cause-and-effect diagrams, frequency histograms, trend graphs, and flow charts.		
ISO15189:2022 Clause 8.6		
SECTION 11: CONTINUAL IMPROV	/EME	NT /07

SECTION 12: FACILITIES AND SAFETY

REQUIREMENTS	Y/P/N/	Comment
	NA	
12.1 <u>Procedure and/or Process for Laboratory Safety</u> Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following?		Score /3
Note 1: The safety procedures and or processes can be in the form of a safety manual.		
Note 2: Laboratory management must implement a safe laboratory environment in compliance with good laboratory practice and applicable requirements.		
Ensure all safety measures are implemented at the laboratory as applicable to national and/or international guidelines and regulations.		
ISO15190:2020 Clause 12.10		
12.2 Facilities and Environmental Conditions		Score /3
(including POCT) Has the laboratory defined a procedure and/or process that addresses, but is not limited to, the following?		
Note. Evaluating and determining the sufficiency and adequacy of space may be done during internal audits, risk assessments or at management review meetings. However, it must be documented that it was evaluated and found to be adequate.		
a. Define how to evaluate and determine the sufficiency and adequacy of the space allocated for the		
 performance of the scope of work; b. Ensure storage and disposal facilities meet applicable requirements; 		
c. Ensure personnel have space for personal activities (supply of drinking water, storage space for personal and protective equipment and clothing);		
d. Monitor, control and record any specific environmental and facility requirements;		
e. Sample collection facilities, taking into consideration patient privacy, comfort, and needs (e.g., disabled access, toilet facility) of patients and accommodation of accompanying persons (e.g., guardian or interpreter) during collection;		
f. Implementation, recording, monitoring, and reviewing of facility controls (access, safety, etc.).		
ISO15189:2022 Clause 6.3		
12.3 Adequacy of Size and Layout of Laboratory Is there documented evidence that the laboratory has evaluated the adequacy of the size and layout of the laboratory and organised the space so that workstations are positioned to reduce risk, ensure optimal workflow,		Score /2
and prioritise occupational health? Note: Documentation could be in the form of a floor plan, results from internal audits, risk assessment. Chairs/stools at the workstations should be appropriate for bench height and for the testing operations being performed.		
ISO15190:2020 Clause 4.2 and Clause 12		

12.4 Patient Care Areas	Score /2
Are patient care and testing areas of the laboratory	
distinctly separate from one another?	
Note: Patient care areas (i.e., waiting room, phlebotomy room)	
should be distinctly separate from the testing areas of the	
laboratory. For biosafety reasons, microbiology tuberculosis, and	
molecular testing should be segregated in a separate room(s) from the general laboratory testing.	
ISO15189:2022 Clause 6.3.1	
12.5 Housekeeping	Score /2
Are housekeeping activities performed to ensure the	30010 72
efficient operations of the laboratory and the safety of the	
personnel, users, and patients?	
a. Are there records of housekeeping duties performed	
daily (at the minimum)?	
b. Are all necessary housekeeping supplies present and	
easily accessible?	
c. Are all equipment and work surfaces (that are used for	
processing contaminated materials) cleaned and	
disinfected with appropriate agents both before and at	
the end of each working shift and whenever spills or	
other contamination has occurred?	
ISO15190:2020 Clause 18	
12.6 Physical Work Environment	Score /3
Is the physical work environment appropriate for testing?	
a. Free of clutter?	
ISO 15190: 2020 Clause 18 j	
b. Adequately ventilated? ISO 15190: 2020 Clause 9.2	
c. Climate-controlled for optimum equipment function? ISO 15189:2022 Clause: 6.3.1	
d. Are filters checked, cleaned and/or replaced at regular	
intervals, where air-conditioning is installed?	
e. Are wires and cables properly installed and protected	
from hazardous factors and from traffic?	
f. Is there a functioning back-up power supply	
(generator) and are there records of maintenance?	
g. Is critical equipment supported by uninterrupted power	
source systems?	
h. Is all equipment placed appropriately (away from	
water hazards, out of traffic areas)?	
i. Are appropriate provisions made for adequate water	
supply, including deionised water or distilled water, if	
needed?	
j. Is clerical work performed in a designated clean area?	
k. Is safety signage posted and enforced, including "NO	
EATING, SMOKING OR DRINKING"?	
ISO15190:2020 Clause 4.2	
12.7 <u>Laboratory Access</u>	Score /2
Is the laboratory properly secured from unauthorised	
access with appropriate systems and signage?	
Note: Access control obsided take into consideration and the	
Note: Access control should take into consideration safety, confidentiality and quality and safeguard medical information and	
patient samples.	
ISO15190:2020 Clause 4.3.3; ISO15189:2022 Clause 6.3.1	
12.8 <u>Laboratory Storage Areas</u>	Score /3
Is there adequate storage space under the appropriate	
conditions and properly labelled for the following?	
Note: There should be effective separation to prevent	
contamination.	

	Samples;			
b.	Equipment;			
c.	Reagents and consumables;			
d.	Documents and records;			
e.	Patient samples and materials used in examination processes (stored separately);			
f.	Hazardous materials and biological waste appropriate to the classification in context of any statutory or regulatory requirements;			
g.	Personnel items, food, and drinks.

ISO 15190:2020 Clause 5.7 and Clause 18	
12.12 Laboratory Safety Manual	Score /3
Is a laboratory safety manual available, accessible, and up to date?	
Does the safety manual include guidelines on the following topics?	
a. Safety policy;	
b. Blood and body fluid precautions;	
c. Biosafety and biosecurity hazards, where appropria	te;
d. Risk assessment and mitigation;	
e. Biological hazards;	
f. Hazardous waste disposal;	
g. Chemical safety;	
h. Radiation;	
i. Vaccination;	
j. Post-exposure prophylaxis	
k. Fire prevention;	
I. Electrical safety.	
ISO15190:2020 Clause 5.6	
12.13 Waste Disposal	Score /2
Note 1: Waste should be separated according to biohazard risk, with infectious and non-infectious waste disposed of in separate containers. Infectious waste should be discarded into container that do not leak and are clearly marked with a biohazard symbol Sharp instruments and needles should be discarded in punctur resistant containers. Both infectious waste and sharps contained should be autoclaved before being discarded to prevent injury the exposed waste; infectious waste should be incinerated, burnt in pit, or buried.	e s !. e ers rom
Note 2: All syringes, needles, lancets, or other bloodletting device capable of transmitting infection must be used only once and discarded in puncture resistant containers that are not overfilled. Sharps containers should be clearly marked to warn handlers of potential hazard and should be available in areas where sharps commonly used.	d. f the are
a. Is sufficient waste disposal available and adequate	
 Is waste separated into infectious and non-infections waste, with infectious waste autoclaved/incinerate 	
c. Are 'sharps' handled and disposed of properly in 'sharps' containers that are appropriately utilised?	

d.	Are adequate records of hazardous waste disposal retained in an accessible file by the laboratory?			
ISO	15190:2020 Clause 17			
	14 <u>Hazardous Chemicals</u> hazardous chemicals/materials properly handled?		Score	/3
cor	e: Chemicals present a broad range of physical (e.g., flammable, rosive) and biological (e.g., toxic, radioactive, carcinogenic) ards.			
a.	Are hazardous chemicals properly classified and labelled?			
	Are chemicals segregated and stored by reactivity class and flammability?			
C.	Are hazardous chemicals properly utilised according to safety data sheets (SDS)?			
pers kep the	e: The SDS may be available in a computerised format as long sonnel are trained on how to access them, the computers are t in working order and the employer can provide a hard copy of SDS on request.			
d.	Are hazardous chemicals properly disposed of according to national and/or international guidelines or SDS?			
e.	Is there documented information and records of communication with laboratory personnel regarding the potential routes of entry for toxic chemicals and how best to perform the necessary precautions to prevent exposure?			
	 Are oxidizing materials used with appropriate precautions? 			
	 Are corrosive materials used with appropriate precautions? 			
	 Are suitable chemical spill measures provided, including neutralizing agents, spill containment, and absorbents appropriate for the chemicals used. 			
nan stor stee age	e: All hazardous chemicals must be labelled with the chemical's ne and with hazard markings. Flammable chemicals must be red out of sunlight and below their flashpoint, preferably in a sel cabinet in a well-ventilated area. Flammable and corrosive nts should be separated from one another. Distinct care should ays be taken when handling hazardous chemicals.			
ISO	15190:2020 Clause 8			
	15 Fire Safety		Score	/2
	Are all electrical cords, plugs, and receptacles used appropriately, installed, and in good condition?			
of t	e: Overloading should be avoided, and cords should be kept out raffic areas			
b.	Is an appropriate fire extinguisher available, properly placed, in working condition, and routinely inspected?			
with	e 1: An approved fire extinguisher should be easily accessible nin the laboratory and be routinely inspected and documented readiness.			
and noz	e 2: Fire extinguishers should be kept in their assigned place not hidden or blocked, the pin and seal should be intact, zles should be free of blockage, pressure gauges should show quate pressure, and there should be no visible signs of damage.			
	Are there automatic smoke-detection, heat-detection, and alarm systems adequately placed within the laboratory?			
	e: A fire alarm should be installed in the laboratory and tested ularly for readiness.			

d. Is there a training programme in fire safety including fire drills and use of fire extinguishers, which is given to all laboratory workers and personnel who share the building?	
Note: All personnel should participate in periodic fire drills. Fire safety training should be performed during orientation and annually at a minimum.	
ISO15190:2020 Clause 11	
12.16 Safety Audits	Score /2
Are safety inspections or audits conducted regularly and	
documented?	
Note: Work sites shall be surveyed/inspected at least annually.	
a. Is there a safety audit plan or schedule that ensures	
all activities of the laboratory are checked for safety compliance?	
b. Are safety inspections or safety audits being carried out by authorised personnel?	
 Are the personnel conducting the internal audits trained in safety? 	
d. Is root cause analysis and corrective action taken for safety inspection findings?	
e. Are safety inspection findings documented and	
presented to the laboratory management and relevant	
personnel for review? ISO15190:2020 Clause 5.7	
	Score /3
12.17 <u>Safety Equipment</u> Is standard safety equipment available and properly used	Score /3
within the laboratory?	
Note: Management is responsible for providing appropriate personal protective equipment (gloves, lab coats, eye protection, etc.) in useable condition. Laboratory personnel must always utilise personal protective equipment while in the laboratory. Protective clothing should not be worn outside designated working areas.	
Safety cabinet(s) (including biosafety cabinets, laboratory hoods, etc.);
